Laudan Problem Solving And Is Building

Geoff Jordan

Laudan Problem Solving And Is Building:

Building Theories David Danks, Emiliano Ippoliti, 2018-01-18 This book explores new findings on the long neglected topic of theory construction and discovery and challenges the orthodox current division of scientific development into discrete stages the stage of generation of new hypotheses the stage of collection of relevant data the stage of justification of possible theories and the final stage of selection from among equally confirmed theories The chapters written by leading researchers offer an interdisciplinary perspective on various aspects of the processes by which theories rationally should and descriptively are built They address issues such as the role of problem solving and heuristic reasoning in theory building how inferences and models shape the pursuit of scientific knowledge the relation between problem solving and scientific discovery the relative values of the syntactic semantic and pragmatic view of theories in understanding theory construction and the relation between ampliative inferences heuristic reasoning and models as a means for building new theories and knowledge Through detailed arguments and examinations the volume collectively challenges the orthodox view's main tenets by characterizing the ways in which the different stages are logically temporally and psychologically intertwined As a group the chapters provide several attempts to answer long standing questions about the possibility of a unified conceptual framework for building theories and formulating hypotheses

The Relationship Between a Model-building Problem-solving Classroom and Conceptual Change Learning John S. Lemberger, 1995

Theory Construction in Second Language Acquisition Geoff Jordan, 2004 Recently many SLA researchers have adopted a postmodernist approach which challenges the assumption that SLA research is a rationalist scientific endeavour The resulting epistemological arguments plus problems of theory proliferation contradicting theories and theory domain hinder progress towards a unified theory of SLA Theory Construction in SLA addresses these problems by returning to first principles it asks whether there is such a thing as reliable knowledge what is special about scientific method and how we can best explain SLA It is the first book to use the philosophy of science in order to examine the epistemological underpinnings of SLA research and evaluate rival theories of SLA Part One explores the central issues in the philosophy of science defends rationality against relativists and offers Guidelines for theory assessment Part Two examines different theories of SLA and evaluates them in terms of how well they stand up to the Guidelines

Problems in Second Language Acquisition Michael H. Long, 2017-09-25 Second language acquisition has an identity problem It is a young field struggling to emerge from the parent fields of education and applied linguistics In his new book *Problems in Second Language Acquisition* Mike Long proposes a way to help second language acquisition develop a systematic and coherent focus using the philosophy of science as the lens The volume is neatly organized into three parts theory research and practice This structure allows a focus on areas of SLA of interest to many in the field These include theory proliferation and comparative theory evaluation the Critical Period Hypothesis and negative feedback and the practice of synthetic language teaching The controversial volume will be of interest to researchers

educators and graduate students in second language acquisition applied linguistics TESOL and linguistics programs It may be recommended as additional reading for an introductory SLA course in order to stimulate class discussions The Heuristic View Emiliano Ippoliti, Fabio Sterpetti, 2025-10-01 This volume offers a series of thought provoking analyses that explore non mainstream perspectives on knowledge acquisition and scientific discovery A central theme across many of the contributions is the heuristic conception of method a view that finds its philosophical roots in Imre Lakatos's work in the philosophy of mathematics and more distantly in Platonic notions of philosophical inquiry Knowledge acquisition is frequently conceptualized as a form of problem solving and problem solving is typically regarded as a rational endeavor However the dominant view in the philosophy of science has long held that scientific discovery resists systematic explanation in terms of logic and rationality If an alternative account of discovery grounded in these terms can be developed it would represent a significant theoretical advancement The essays collected in this book critically assess the promise and limitations of such non standard accounts and they investigate the possibility of framing scientific discovery within a logical and rational framework This volume will be of particular interest to scholars in the philosophy of science epistemology philosophy of mathematics and philosophy of logic as well as to scientists engaged in theoretical inquiry and graduate students working in these or related areas *From Idea to Building* Michael Brawne, 1992 Both for architects and for general readers concerned with the effect of the built environment explores how the design process influences the architectural outcome of a building and how it fits into the overall artistic and technological state of the society Draws on recent work in the philosophy of architecture and on case studies many of them Brawne's own projects Highly illustrated Annotation copyright by Book News Inc Portland OR A Model of "integrated Scientific Method" and Its Application for the Analysis of Instruction Craig F.
