*Mac User's Guide to Living Wirelessly* Brad Miser, 2005 The major force driving people to embrace wireless computing is Wi Fi Once dismissed as a fad Wi Fi is rapidly becoming ubiquitous in the US and around the world In 2004 more than half of all laptops sold in the US shipped with Wi Fi installed By 2007 most analysts predict that nearly every laptop sold in the US will include Wi Fi Nearly 20 million Wi Fi access points will be sold this year up 20% from last year As these numbers grow prices will continue to fall making Wi Fi more attractive to more and more people By the end of this year there will be more than 40 000 hotspots public Wi Fi access points available across the US in hotels fast food restaurants caf s airports even parks By 2007 that number will surpass 100 000 From McDonald s to Kinko s to Holiday Inn Wi Fi is becoming a killer amenity Once Wi Fi networks are in place they can be used for much more than just Internet access For example the AirPort Express allows users to stream iTunes throughout their homes wirelessly Wi Fi is being used to network

printers cameras and ultimately home entertainment devices

Guide to Wireless Network Security John R.

Vacca,2006-10-16 1 INTRODUCTION With the increasing deployment of wireless networks 802.11 architecture in enterprise environments IT enterprises are working to implement security mechanisms that are equivalent to those existing today for wire based networks An important aspect of this is the need to provide secure access to the network for valid users Existing wired network jacks are located inside buildings already secured from unauthorized access through the use of keys badge access and so forth A user must gain physical access to the building in order to plug a client computer into a network jack In contrast a wireless access point AP may be accessed from off the premises if the signal is detectable for instance from a parking lot adjacent to the building Thus wireless networks require secure access to the AP and the ability to isolate the AP from the internal private network prior to user authentication into the network domain Furthermore as enterprises strive to provide better availability of mission critical wireless data they also face the challenge of maintaining that data's security and integrity While each connection with a client a supplier or a enterprise partner can improve responsiveness and efficiency it also increases the vulnerability of enterprise wireless data to attack In such an environment wireless network security is becoming more important every day Also with the growing reliance on e commerce wireless network based services and the Internet enterprises are faced with an ever increasing responsibility to protect their systems from attack
