Irrigation And Drainage Engineering:

Irrigation and Drainage Engineering Peter Waller, Muluneh Yitayew, 2015-11-18 This textbook focuses specifically on the combined topics of irrigation and drainage engineering. It emphasizes both basic concepts and practical applications of the latest technologies available. The design of irrigation pumping and drainage systems using Excel and Visual Basic for Applications programs are explained for both graduate and undergraduate students and practicing engineers. The book emphasizes environmental protection, economics, and engineering design processes. It includes detailed chapters on irrigation, economics, soils, reference evapotranspiration, crop evapotranspiration, pipe flow, pumps, open channel flow, groundwater, center pivots, turf and landscape drip, orchards, wheel lines, hand lines, surfaces, greenhouse hydroponics, soil water movement, drainage systems design, drainage and wetlands, contaminant fate and transport. It contains summaries, homework problems, and color photos. The book draws from the fields of fluid mechanics, soil physics, hydrology, soil chemistry, economics, and plant sciences to present a broad interdisciplinary view of the fundamental concepts in irrigation and drainage systems design.

Drainage Engineering: Principles and Practices S.K. Gupta, 2019-04-01 The current book attempts to fill the gap in one of the major subjects of land drainage that will have a major impact on production and productivity of irrigated lands. The book, titled *Drainage Engineering: Principles and Practices*, deals with the subject of surface and subsurface drainage to reclaim waterlogged, salt-affected soils. Based on the course curricula as suggested by Deans committee constituted by ICAR, the current publication has been divided into 11 chapters covering all the facets of land drainage as applied to agriculture. Each chapter covers one of the related issues, beginning with a general introduction to water logging, soil salinity, and land drainage in Chapter 1. Surface drainage methods, an essential intervention in monsoon climatic regions, and as a supplement to the subsurface drainage are included in Chapter 2. Drainage investigations, a precursor to problem diagnosis and to assemble the drainage design parameters, are included in Chapter 3. The drainage design procedures, such as assessment of drainage depth, spacing, and capacity of drains, form the subject matter of Chapter 4. While drainage materials are discussed in Chapter 5, drainage construction procedures and methodologies to monitor and evaluate completed projects are included in Chapter 6. Some of the new drainage techniques, such as mole interceptor, vertical, and bio drainage, have been included in Chapter 7, since these can either be applied singly or in integration with horizontal subsurface drainage. Chapters 8-10 deal with reclamation of salt-affected soils, acid soils, and management of saline water. Eco-friendly reuse and disposal of saline drainage water also form the subject matter of discussion in Chapter 10. Cost calculations, socio-economic and environmental issues associated with drainage projects, have been included in the final chapter. A glossary of terms has been added for a quick overview of the terms used in the book. Clearly, each and every aspect of surface and subsurface drainage for agricultural lands has been covered in the book. Besides covering the principles of land drainage, field practices have been included, making the book a handy tool for specialized training programmes on land drainage. It is believed that the book will find its

place in the shelves of students and teachers field functionaries and libraries of state agricultural universities and civil engineering colleges
