Metric Rigidity Theorems On Hermitian Locally Symmetric Manifolds:

Metric Rigidity Theorems On Hermitian Locally Symmetric Manifolds Ngaiming Mok, 1989-07-01 This monograph studies the problem of characterizing canonical metrics on Hermitian locally symmetric manifolds X of non compact compact types in terms of curvature conditions The proofs of these metric rigidity theorems are applied to the study of holomorphic mappings between manifolds X of the same type Moreover a dual version of the generalized Frankel Conjecture on characterizing compact Kähler manifolds are also formulated

Arithmetic Groups and Their Generalizations Lizhen

Ji, 2008 In one guise or another many mathematicians are familiar with certain arithmetic groups such as \mathbf{Z} or $\mathrm{SL}(n, \mathbf{Z})$ Yet many applications of arithmetic groups and many connections to other subjects within mathematics are less well known Indeed arithmetic groups admit many natural and important generalizations The purpose of this expository book is to explain through some brief and informal comments and extensive references what arithmetic groups and their generalizations are why they are important to study and how they can be understood and applied to many fields such as analysis geometry topology number theory representation theory and algebraic geometry It is hoped that such an overview will shed a light on the important role played by arithmetic groups in modern mathematics Titles in this series are co published with International Press Cambridge MA Table of Contents Introduction General comments on references Examples of basic arithmetic groups General arithmetic subgroups and locally symmetric spaces Discrete subgroups of Lie groups and arithmeticity of lattices in Lie groups Different completions of \mathbb{Q} and \mathbb{S} arithmetic groups over number fields Global fields and \mathbb{S} arithmetic groups over function fields Finiteness properties of arithmetic and \mathbb{S} arithmetic groups Symmetric spaces Bruhat Tits buildings and their arithmetic quotients Compactifications of locally symmetric spaces Rigidity of locally symmetric spaces Automorphic forms and automorphic representations for general arithmetic groups Cohomology of arithmetic groups K groups of rings of integers and K groups of group rings Locally homogeneous manifolds and period

domains Non cofinite discrete groups geometrically finite groups Large scale geometry of discrete groups Tree lattices Hyperbolic groups Mapping class groups and outer automorphism groups of free groups Outer automorphism group of free groups and the outer spaces References Index Review from Mathematical Reviews the author deserves credit for having done the tremendous job of encompassing every aspect of arithmetic groups visible in today s mathematics in a systematic manner the book should be an important guide for some time to come AMSIP 43 **Complex Geometric Analysis in Pohang**

Kang-Tae Kim, Steven George Krantz, 1999 This volume comprises the proceedings of a conference on the geometric analysis of several complex variables held at POSTECH in June 1997 The conference was attended by scientists and students from around the globe Each of the five plenary speakers at the conference gave a short course on a topic of current interest in the field The lecture write ups contain cogent and accessible information intended for a broad audience The volume also includes a tutorial in several complex variables given by Kim and Krantz at the conference This tutorial is geared toward helping the novice to understand the rest of the material in the book The bibliographies of the papers give students and young mathematicians a valuable resource for future learning on the topic This book provides a substantial overview on areas of current activity Required background for understanding the text is a solid undergraduate education in mathematics and familiarity with first year graduate studies in real and complex analysis Some exposure to geometry would be helpful The book is also suitable for use as a supplemental course text **Geometric Function Theory in Several Complex Variables**
