Muralinath , Dr. A. Prasanth Babu , Dr. K. Sravani Pragna , Dr. P. Manjari , Dr. Kalyan C. Chapalamadugu , Dr. M. Guru Prasad & Dr. L. S. S. Vara Prasas Reddy,2022-10-20 1 Explain about the functions of the reproductive system Ans 1 Production of sperm 2 Transport and maintenance of sperm 3 Nuturing of developing off spring and 4 secretion of male sex hormones 2 Describe the testis ANS In males it is the primary sex organ or gonad It matches with ovary in females Generally 2 tests are present in all the Species Both testes are located in scrotum in most of the species Test is consists of 900 coiled tubules termed as seminiferous Tubules SFT which yield sperms SFTs commence as the vas efferents which form epididymis It proceeded as vas deferens The terminal part of vas deferens is termed as Ampulla Male Reproductive System Akmal El-Mazny,2016-01-01 The male reproductive system consists of the hypothalamic pituitary unit the testes the reproductive

tract and the external genitalia The functions of the male reproductive system are to produce and deliver spermatozoa for sexual reproduction and produce hormones that regulate reproductive function and secondary sex characteristics Abnormalities in anatomic or physiologic function affect the development and delivery of spermatozoa and potential fertility Male factors are often the cause of a couple's failure to conceive therefore it is important to evaluate and treat the male partner A male factor may be due to abnormalities of hormonal control testicular function or sperm transport or delivery This book provides a comprehensive review of the clinical anatomy and physiology specific to male reproductive system emphasizing causes and management of male infertility By developing a clear understanding of what is normal you will better understand abnormalities affecting male fertility and the mechanisms behind treatment Male Reproductive Function and Semen T. Mann, C. Lutwak-Mann, 2012-12-06 To present a coherent and meaningful survey of scientific research endeavour in an area that has expanded as fast as physiology and biochemistry of reproduction in the male is no mean task these days No less prodigious than the growth of knowledge of male reproductive function has been the rate at which the outpouring of publications on this subject has continued since the appearance of *The Biochemistry of Semen* and of *The Male Reproductive Tract* in 1964 Since cyclopaedic treatment of this vast literature did not appeal to us we have made no attempt either to rehash the material contained in that book or to enlarge the bibliography beyond the nearly 3500 references included in the present treatise At the same time whilst writing we felt strongly that to advance it is necessary to understand the past and for this reason we have not hesitated to refer especially in the introductory chapter to a number of those fundamental early discoveries in which today's knowledge is deeply and firmly rooted Molecular Biology of the Male Reproductive System David de Kretser, 2012-12-02 Written by experts in their respective fields this book reviews the expanding knowledge concerning the mechanisms regulating male reproduction at the molecular and cellular levels It covers the development of the testes and regulatory controls for spermatogenesis and steroidogenesis and it considers aspects of Sertoli cell function Areas of emphasis include communication between the various cell types involved in reproduction by hormone and growth factors and the mechanisms by which these factors regulate gene expression A number of mammalian systems including humans are covered The carefully selected authors provide a clear synopsis of the concepts in each area as well as the latest references enabling the reader to investigate the topic further This book is of interest to those seeking an understanding of the regulatory mechanisms in male reproduction and is written for the graduate and postgraduate levels Provides up to date reviews of the molecular and cellular biology of male reproduction Includes chapters on the developmental biology of the testes Links conventional hormonal control of testicular function with the evolving role of growth factors and proto oncogenes **Physiology and Toxicology of Male Reproduction** James C. Lamb, Paul M. D. Foster, 2013-10-22 Physiology and Toxicology of Male Reproduction is a collection of papers that deals with general reproductive biology and specific aspects of reproductive toxicology pertaining to the male sex Some papers discuss

testicular organization reproductive toxicity testing systems and germ cell genetic toxicology The use of in vitro systems by investigators to dissect the male reproductive toxicants can lead to a more scientific approach toward hazard assessment and the development of safer drugs and chemicals Other papers explain the fundamental reproductive biology of the testis the neuroendocrine system the epididymis and accessory sex organs and spermatozoal evaluation Toxicological aspects cover the toxicological evaluation of the complete reproductive system testicular morphology sperm assessment and germ cell mutagenesis One paper describes alternative methods in toxicology by using new in vitro systems that should reduce or eliminate the need for tests conducted on animals In vitro methodology embraces other systems such as from subcellular fractions to isolated intact organs In relation to target organ toxicity the researcher can focus using primary cell cultures This collection will prove helpful to toxicologists graduate students and researchers in biology particularly in male reproductive toxicology and fertility testing
