NOTE: On 1970 and early 1971 models (just before June 1971), the machine from the battery's positive terminal (B+) on the regulator is a solid red wire. A solid red wire also joins regulator terminal B+ with a terminal (B) on the light switch—the terminal (B) being in the location shown by terminal B in the diagram. On these earlier models, there is no terminal B on the steering column switch and no black and yellow wires joining it to a terminal B on the light switch.

Red wires (from June 1971 on):  
 The orange colored wires on the connecting  
 electrical harness which are used in the wiring  
 plug. The red wire in the plug connected to  
 the terminal in the wiring plug.
