Introduction to Ethics Chhanda

Chakraborti, 2023-09-17 The book introduces the reader to western ethics as a subject along with its three standard subdivisions. Although the book is written with university students, policymakers and professionals in mind, the book is lucid enough to be accessible to most adult readers. The book begins with introductions to the basics of ethics. These chapters are meant to provide the reader with the background knowledge necessary for understanding the more technical chapters on metaethics, normative ethics, theories and applied ethics, the three well-known subdivisions within ethics. The chapters that follow take up core ethical issues from each of these areas. The sections focus on explanation and a critical understanding of the ethical issue. The chapters also have examples, cases and exercises to encourage critical thinking and to enable the reader to grasp the issue better. The book has tried to bring contemporary issues such as ethics of human organ transplantation and contemporary theories such as Amartya Sen's concept of Justice and Martha Nussbaum's Capabilities Approach to engage the readers with ethics in the real world. The book concludes with applied ethics but with the example of ethics of artificial intelligence. The aim is to keep ethics as a future-driven activity and to emphasize the need to understand the real-world ethical situations and dilemmas that will affect the stakeholders all around the world in the coming years as artificial intelligence and data-driven technologies change our everyday life.

Food, Environment, and Climate Change Erinn

Gilson, Sarah Kenenhan, 2018-10-18 This volume takes up the pressing issues of justice and responsibility that arise at the intersection of food and agricultural systems, environmental degradation and global climate change. The diverse contributions examine both the various ways that food and agricultural practices contribute to environmental degradation, especially climate change, and the impact that climate change is having and will have on food and agricultural practices. Central questions include: How can the connections between food and agriculture, environmental issues and climate change best be understood? What are the ethical and political responsibilities of various parties in relation to this nexus of problems? Whose knowledge, concerns and voices are and should be valued in making global climate policy and agricultural and food policy? What are the limitations of existing policies, practices and theoretical frameworks for understanding and responding to these complex problems?
