SUBJECTIVE QUESTIONS AND ANSWERS

Q.1. What are scalar and vector quantities ? Give graphical representation of a vector.

Ans. Scalar Quantities : Those physical quantities which have magnitude only but have no direction are called the scalar quantities or scalars. For example, length, mass, time, work, power etc.

Vector Quantities : Those physical quantities which are having magnitudes as well as directions both, are called vector quantities or vectors. For example, displacement, force, velocity, acceleration, torque etc.

Graphical Representation of Vector : Graphically, a vector is represented by an arrow drawn to a chosen scale, parallel to the direction of the vector. The length and the direction of the arrow thus represent the magnitude and the direction of the vector respectively. Thus, the arrow in fig.2.1 represent a vector \vec{A} in XY-plane making an angle θ with X-axis.
