Manual Skills, Handedness, and the Organization of Language in the Brain Gregory Króliczak, Claudia L. R. Gonzalez, David P. Carey, 2019-08-15 Whereas the cerebral specialization for skilled manual actions praxis seems closely linked to dominance for language with both functions left lateralized in the vast majority of humans the neural correlates of hand preference are still

less well understood Indeed as a combination of inherited and non inherited genomic factors i e direct parental and concealed environmental contributions handedness in contrast to language is less likely to have strong genetic indices and clearly lateralized functional organization What about eye dominance unimanual and bimanual object manipulation and gestures or attentional systems and the related egocentric or allocentric coding of space Are these different categories functionally and structurally interconnected Is their development and contribution to task performance linked even if they are differently lateralized How are they connected to language learning or its development In trying to understand these relationships and their neural underpinnings we obtain a new insight into fundamental human behaviors which depend either on shared or distinct cerebral resources that must nevertheless be harmonized by higher order cerebral processing In this Research Topic we assembled a dozen of original research contributions as well as articles with more theoretically driven perspectives that directly speak to these issues Hopefully this work will serve as a foundation for further discussions and will stimulate new research in this fascinating domain

The Airborne Mafia Robert F. Williams, 2025-03-15 The Airborne Mafia explores how a small group of World War II airborne officers took control of the US Army after World War II This powerful cadre cemented a unique airborne culture that had an unprecedented impact on the Cold War US Army and beyond Robert F Williams reveals

the trials and tribulations this group of officers faced in order to bring about their vision He spotlights the relationship between organizational culture operational behavior and institutional change in the United States Army during the Cold War showing that as airborne officers ascended to the highest ranks of the army they transmitted their culture throughout their service in four major ways civil military relations preparation for potential atomic combat helicopter airmobility and strategic response forces Experiences of training and commanding airborne divisions in World War II led these men to hold sway in army doctrine by the mid 1950s Dominating institutional thought and imparting their values beliefs and norms throughout the service they enjoyed a special privilege within the group culture Williams demonstrates this impact privilege and power by focusing on the paratrooper triumvirate of Matthew Ridgway Maxwell Taylor and James Gavin and the lasting impression they made on how the US Army fought The Airborne Mafia illuminates the power subcultures can have in changing their parent cultures over time particularly one as set in its ways and as large as the US Army With a deft touch deep research and an unwavering eye for the human stories behind organizational change Williams helps explain the existence and importance of the paratrooper mystique that remains within the military still today Chequamegon-Nicolet National Forest (N.F.), Honey Creek-Padus Project ,2010 *Moody's International Manual* ,1994 *Mergent International Manual* ,2009
