Wireless Access Point Router with 4-Port Switch

Connect Your Wired and Wireless Networks to the Broadband Internet

The Wireless Access Point Router provides the ideal solution for connecting your wireless network to a high-speed broadband Internet connection and a 10/100 Fast Ethernet backbone. Configurable as a DHCP server for your existing network, the Wireless Access Point Router acts as the only externally recognized Internet gateway on your local area network (LAN) and serve as an Internet NAT firewall against unwanted outside intruders. The Router can also be configured to filter internal users' access to the Internet.

A typical router relies on a separate hub or switch to share its broadband Internet connection, but the Wireless Access Point Router channels this connection through the blazing, full duplex speed of its built-in 4-port, 10/100 switch. This cutting-edge combination of wireless router and switch technology eliminates the need to buy an additional hub or switch and extends the range of your wireless network. Now your entire wireless network can enjoy blazing broadband Internet connections supported by its robust switched backbone. With the dual-function speed and power of the Wireless Access Point Router, your network will take off at speeds faster than you ever imagined possible.
