Chapter 6 Cost Allocation and Activity-Based Costing

QUESTIONS

1. The statement is false. Cost allocation refers to the process of assigning indirect costs. Direct costs are traced to cost objects. Costs are allocated for a variety of reasons. It is not economically feasible to directly trace some costs to cost objects—these costs are classified as indirect costs and are allocated to the cost object via the use of an allocation base.
2. A cost objective is a product, service, or department that receives an allocation of cost. For example, a production department that receives an allocation of janitorial cost is a cost objective. Likewise, a product in a department that receives an allocation of depreciation of equipment is a cost objective.
3. A concern in forming a cost pool is that the costs within the cost pool be similar or homogeneous. It is unlikely that variable and fixed costs are similar (i.e., that one allocation base is suitable for allocating both fixed and variable costs). Homogeneous cost pools provide more accurate information and this would be a benefit of having one pool for variable costs and one for fixed costs.
4. Number of employees in a department would, most likely, result in a cause-and-effect allocation (at least for the variable costs in the cafeteria).
