

Python Programming Language Viva Questions with Answers

Below are the answers to some commonly asked questions about Python programming language:

What is a list in Python?

A list in Python is used to store multiple items in a single variable. It is one of the four built-in data types in Python, along with tuples, sets, and dictionaries.

What are tuples?

Tuples are collections of Python objects separated by commas. They are similar to lists in terms of indexing and nested objects, but tuples are immutable, unlike lists which are mutable.

What is a dictionary in Python?

A dictionary in Python is an implementation of a data structure known as an associative array. It consists of collections of key-value pairs, where each key-value pair maps the key to its associated value.

What are functions?

A function is a block of code that only runs when it is called. Data, known as parameters, can be passed into a function, and a function can return data as a result.

What are local and global variables?

Local variables can only be accessed inside the functions in which they are declared, while global variables can be accessed throughout the program body by all functions.

How many types of modules are there in Python?

There are four types of modules in Python: module1.py, module2.py, module3.py, and module4.py.

What are classes and objects?

A class is a code template for creating objects, which have member variables and behaviors associated with them. An object is created using the constructors of the class.
