

Slave system collect the information about like amount of rain, temperature, moisture from sensor and from various other unit. This information sends it towards master for further processing. Master analysis that data and take a decision and make logic. The decision include at what speeded the wiper motor rotate, and check whether there is any change in outer and inner temperature if there is small changes then no action to be taken, and if there is vast changes in temperature then which will automatically make the response to the presence of moisture and according adjust that temperature and remove moisture inside car windshield.

Fig : System Implementation On Car

The problem definition is to design a prototype for a PIC microcontroller (PIC18F2580) based vision system aid in windshield assembly which controls the windshield wiper speed based on the amount of water. For this a comprehensive study of sensors, actuators and mechanical design was done. Development of hardware module and the software has progress. The basic method used for designing the circuit is that a rain level sensor will detect the amount of rain and give the signal to the controller.
