Applications in Industry, 1998-12-17 Volume I contains a brief review of adsorption history and its development for practical purposes up until now It also presents some important information on adsorbents and catalysts as well as on the methods of their characterization. The part of this volume dealing with practical industrial applications includes chapters presenting advanced technical tools for high capacity adsorption separation of liquid and gas mixtures development of new adsorbents for removal of hazardous contaminants from combustion flue gases and wastewaters degasification of coal seams and fabrication of inorganic membranes and their applications A comprehensive review is also included on contemporary utility of self assembled monolayers adsorption proteins and their role in modern industry adsorption methods in technology of optical fibre glasses sol gel technology solid desiccant dehumidification systems etc. The articles give both the scientific backgrounds of the phenomena discussed and emphasize their practical aspects The chapters give not only brief current knowledge about the studied problems but are also a source of topical literature on the subject A comprehensive bibliography on adsorption principles design data and adsorbent materials for industrial applications for the period 1967 1997 concludes the book Protein Byproducts Gurpreet Singh Dhillon, 2016-08-13 Protein Byproducts Transformation from Environmental Burden into Value Added Products deals with the added value of proteinaceous waste byproducts discussing in detail the different sources of protein rich byproducts their extraction recovery and characterization The book provides thorough insights into different protein modification techniques to extend the product portfolio using these waste byproducts Divided between three main sections the book covers various feedstock resources such as animal derived plant derived proteins marine waste derived proteins protein extraction and recovery methods and related technical issues including modification and conversion technologies for the production of high value bioproducts It contains contributions from experts in the fields of applied industrial microbiology engineering bioprocess technology protein chemistry food chemistry agriculture plant sciences environmental science and waste management serving as a comprehensive reference for students and research scientists in the food and agriculture industries Covers various feedstock resources protein extraction recovery methods and related technical issues Presents modification and conversion technologies for the production of high value bioproducts Exhibits case studies and examples to illustrate both driving forces and constraints in the utilization of these proteinaceous materials Contains contributions from experts in the fields of applied industrial microbiology engineering bioprocess technology protein chemistry food chemistry agriculture plant sciences environmental science and waste management Serves as a comprehensive reference for students and research scientists in the food and agriculture industries

Chemical Engineering Faculty Directory 2002-2003 D.R. Lloyd,2002-12-31 Updated annually this directory provides information on over 150 US and over 250 international chemical engineering programmes Chemical Engineering Education ,1991 Multiple Representations in Chemical Education John K. Gilbert, David Treagust, 2009-02-28

Chemistry seeks to provide qualitative and quantitative explanations for the observed behaviour of elements and their compounds Doing so involves making use of three types of representation the macro the empirical properties of substances the sub micro the natures of the entities giving rise to those properties and the symbolic the number of entities involved in any changes that take place Although understanding this triplet relationship is a key aspect of chemical education there is considerable evidence that students find great difficulty in achieving mastery of the ideas involved In bringing together the work of leading chemistry educators who are researching the triplet relationship at the secondary and university levels the book discusses the learning involved the problems that students encounter and successful approaches to teaching Based on the reported research the editors argue for a coherent model for understanding the triplet relationship in chemical education

Chemical Engineering Faculty Directory J. Steven Swinnea, AIChE, 2010 This up to date faculty directory lists the contact information of all the faculty members placement administrators and student organizations of almost 500 worldwide universities and technical institutes offering chemical engineering curricula This offers a comprehensive reference tool that is unique and valuable in that there is no such directory available on chemical engineering The indices make it easy to find the current affiliation of any chemical biological and environmental engineering faculty by listing in alphabetical order

Handbook of Microalgae-Based Processes and Products Eduardo Jacob-Lopes, Mariana Manzoni Maroneze, Maria Isabel Queiroz, Leila Queiroz Zepka, 2020-07-23 The Handbook of Microalgae based Processes and Products provides a complete overview of all aspects involved in the production and utilization of microalgae resources at commercial scale Divided into four parts fundamentals microalgae based processes microalgae based products and engineering approaches applied to microalgal processes and products the book explores the microbiology and metabolic aspects of microalgae microalgal production systems wastewater treatment based in microalgae CO2 capture using microalgae microalgae harvesting techniques and extraction and purification of biomolecules from microalgae It covers the largest number of microalgal products of commercial relevance including biogas biodiesel bioethanol biohydrogen single cell protein single cell oil biofertilizers pigments polyunsaturated fatty acids bioactive proteins peptides and amino acids bioactive polysaccharides sterols bioplastics UV screening compounds and volatile organic compounds Moreover it presents and discusses the available engineering tools applied to microalgae biotechnology such as process integration process intensification and techno economic analysis applied to microalgal processes and products microalgal biorefineries life cycle assessment and exergy analysis of microalgae based processes and products The coverage of a broad range of potential microalgae processes and products in a single volume makes this handbook an indispensable reference for engineering researchers in academia and industry in the fields of bioenergy sustainable development and high value compounds from biomass as well as graduate students exploring those areas Engineering professionals in bio based industries will also find valuable information here when planning or implementing the use of microalgal technologies Covers theoretical background information and results of

recent research Discusses all commercially relevant microalgae based processes and products Explores the main emerging engineering tools applied to microalgae processes including techno economic analysis process integration process Development of a CO2e quantification method and of solutions intensification life cycle assessment and exergy analyses for reducing the greenhouse gas emissions of construction machines Ays, Isabelle Charlotte, 2022-06-27 This work focuses on the development of a quantification method for GHG CO2e emissions from construction machines The method considers CO2e reduction potentials in the time past present future through influencing factors from six pillars Machine efficiency process efficiency energy source operating efficiency material efficiency and CCS In addition transformation solutions are proposed to reduce GHG emissions from construction machines like liquid methane fuel cell drive or CCS Recovery Ajay Mandal, Keka Ojha, 2023-11-29 Oil recovery efficiency can be increased by applying the enhanced oil recovery EOR processes which are based on the improvement of mobility ratio reduction of interfacial tension between oil and water wettability alteration reduction of oil viscosity formation of oil banks and so forth This book describes the different EOR methods and their mechanisms which are traditionally used after conventional primary and secondary processes The present scenario of different EOR processes at both the field application stage and research stage is also covered Further it discusses some of the recent advances in EOR processes such as low salinity water flooding the application of nanotechnology in EOR microbial EOR carbonated water injection etc Features Comprehensive coverage of all enhanced oil recovery EOR methods Discussion of reservoir rock and fluid characteristics Illustration of steps in design and field implementation as well as the screening criteria for process selection Coverage of novel topics of nanotechnology in EOR and hybrid EOR method and low salinity waterfloods Emphasis on recent technologies feasibility and implementation of hybrid technologies This book is aimed at graduate students professionals researchers chemists and personnel involved in petroleum engineering chemical engineering surfactant manufacturing polymer manufacturing oil gas service companies and carbon capture and utilization
