detail and illustrations Textures of Materials : ICOTOM 14 Paul van Houtte, Leo Kestens, 2005 To the materials science community Texture is an important property which describes the relative orientations of the various material elements which constitute the microstructure These elements are usually the crystalline grains each with a different orientation of its crystal lattice However morphological textures such as the arrangement of fibers in a composite material also have to be considered In rare cases the texture is random with all possible orientations being equally represented in the material But usually processing of the material has caused the texture to become non random with a consequent anisotropy of the material properties Thus not only metallurgists and materials scientists take an interest in textures but also physicists mathematicians geologists mechanical engineers and others **Materials and Society** ,1990 **Engineering** ,1917 **Technical Bulletin** ,1927 **Choice** ,2008 **Journal of Educational Modules for Materials Science and Engineering** Charles Allen Wert, Rustum Roy, 1979 **A User's Guide to Engineering** James N.
