The contributors approach the evolution of religion by examining the behavior of individuals in their everyday lives After describing various religious behaviors the contributors consider the behaviors with reference to their evolutionary history development during the lifetime of the individual proximate causes and adaptive value Happily this foray into understanding religion from a biobehavioral perspective demonstrates that at the biological and behavioral levels what unites the different religions of the world is far greater than what divides them This title attempts to explain the link between biology and religious behavior It takes a multidisciplinary approach offering new insights into religious beliefs and behavior that may help bridge religious divisions It demonstrates that religious belief and behavior have evolved in a similar fashion for all religions It provides a means of understanding how religion could have evolved spread and become what it is today from
