

How is the real MCAT scored?

When you take the real MCAT, the AAMC will access your raw scores which are based on the number of correct answers in each section (note: there is no penalty for wrong answers). Your raw scores from each of the 4 sections of the MCAT will then be converted to scaled scores which are the only scores that interest medical school admissions committees. You will receive five scores for the MCAT: one for each of the four sections scored from a low of 118 to a high of 132, with a midpoint of 125; and one combined total score which will range from 472 to 528, with a midpoint of 500.

What is an average, good and high MCAT score?

Average, good and high MCAT scores are relative terms and, as such, are dependent on perspective, the cohort and the medical school to which you intend to apply. There is no pass or fail score for the MCAT; there are only scores that are acceptable for specific, individual medical schools. Consider consulting specific medical schools, or their websites or aamc.org, for past trends.

Please keep in mind that the percentile rank indicates your test performance relative to all the students who sat the same test on the same day. It records the percentage of students whose scores were lower than yours.

	Average score acceptable to some medical schools	Average score acceptable to most medical schools	Average score acceptable to Ivy League medical schools
Qualitatively	average MCAT score	good MCAT score	high MCAT score
Percentile* rank	50 th percentile	80 th percentile	95 th percentile
Sectional MCAT score (max. = 132)	125	127**	129**
Total MCAT score (max. = 528)	500	508**	516**

Note: the expression "average score" does not have the same meaning as cutoff or minimum score. Rather it refers to the simple average of students accepted to medical school (historic and predicted averages). Having an acceptable MCAT score in no way guarantees medical school admissions since acceptance is also contingent on GPA and non-academic factors (i.e. personal statement and/or autobiographical material, letters of reference, and the medical school interview).

* percentile does not refer to the percent, which relates to the ratio of correct answers to the total number of questions. The percentile rank records the percentage of students whose scores were lower than yours. Percentile ranks are not used as medical school admissions criteria. Only the scaled score matters for medical school admissions.

** This assumes that current percentile rank predictions for the new MCAT remain stable.
