Bullying Paul Nail, Joan Simon, 2017-10-02 There was a time when bullying was regarded as a relatively innocuous issue a normal part of growing up but this is no longer the case The magnitude of the problems that bullying can lead to is evidenced by the rising amount of professional literature on bullying as well as recent cases of bully linked suicide and homicide in the popular media Bullying always involves at least one bully and one victim but there are a variety of social roles that can affect the duration and magnitude of bullying These roles include bully assistants or supporters victim defenders and passive bystanders Fundamental to creating successful intervention programs to prevent or reduce bullying is basic research that identifies the characteristics of those involved in bullying situations e g personality motivational intellectual physical social and behavioural This volume presents a broad range of original research describing how social influences are related to bullying Reflecting the fact that bullying is a world wide phenomenon and problem the research comes from samples of individuals from Australia Finland Italy New England and Poland as well as a review of the cyber bullying literature which is international in scope This book was originally published as a special issue of *Social Influence*

Angiogenesis Protocols J. Clifford Murray, 2008-02-02 In the last few years we have been deluged with information on angiogenesis Scientists and the public at large are exposed daily to this new science not just in specialist journals and texts but in the tabloid press where popular articles refer to angiogenic therapies as magic bullets and miracle cures for cancer arthritis retinopathies heart disease and circulatory problems Is there no ill this approach will not cure The fact that so much time effort and resource have been and continue to be dedicated to this new science is clear testament to its importance Yet many fundamental aspects of angiogenesis remain poorly understood in particular cues that activate the process This fact has to some extent been masked behind a surfeit of fine detail we can't see the wood for the trees Most studies of angiogenesis identify single links in a long chain of events Furthermore each study is itself hampered by the limitations of the biological end point chosen For instance though endothelial proliferation may well be necessary for angiogenesis it is not sufficient Therefore measuring endothelial proliferation in response to a novel growth factor and on the basis of this observation stating that the factor is angiogenic is unsound logic It is important that researchers in this field and perhaps more importantly those experimenting at its periphery recognize the limitations of their chosen biological end points
