Light Interactions With Matter Tesccc:

Light-matter Interaction John Weiner, Ping-Tong Ho, Light-Matter Interactions and Quantum Optics Jonathan Keeling, 2014-08-28 Regarding the positive aims of this course they are to discuss how to model the quantum behaviour of coupled light and matter to introduce some simple models that can be used to describe such systems to discuss methods for open quantum systems that arise naturally in the context of coupled light and matter and to discuss some of the more interesting phenomena which may arise for matter coupled to light Semiclassical behaviour will be discussed in some sections both because an understanding of semiclassical behaviour i.e. classical radiation coupled to quantum mechanical matter is useful to motivate what phenomena might be expected and also as comparison to the semiclassical case is important to see what new physics arises from quantised radiation

Field Guide to Light-matter Interaction Galina Nemova, 2022 The interaction of light and matter has long history It evolved from the ancient corpuscular theory to wave theory and finally to the quantum theory Matter is composed of charged particles among them positively charged nucleus surrounded by electrons that are in motion Light is an oscillating electromagnetic wave But light is also particles photons The primary objective of this Field Guide to Light Matter Interaction is to provide the reader with the basic principles of light and matter interaction using classical semiclassical and quantum theories Within this Field Guide you will find formulae and descriptions of phenomena that are fundamental for an understanding of the present state of the art of light matter interaction

Resonant Nonlinear Interactions of Light with Matter Valerii S. Butylkin, Alexander E. Kaplan, Yury G. Khronopulo, Evsei I. Yakubovich, 2011-12-12 This book is devoted primarily to the various kinds of resonant nonlinear interactions of light with two level or in many cases multilevel systems The interactions can involve one photon as well as multiphoton processes in which some combinations of frequencies of participating photons are close to transitions of atoms or molecules e.g. we consider stimulated Raman scattering SRS as a resonant interaction This approach involves a broad spectrum of problems Discussion of some of the basic phenomena as well as the pertinent theory could be found for instance in such well known books as the ones due to N Bloembergen S A Akhmanov and R V Khokhlov L Allen and J H Eberly and to V M Fain and Ya I Khanin The book Quantum Electronics by A Yariv could serve as an introductory guide to the subject Thus some of the basic material in the present book will already be well known to the reader who is an expert in the field There are for instance general density matrix equations two level model and basic effects associated with this model such as saturation of one photon absorption and Rabi oscillations some basic multiphoton processes such as two photon absorption SRS etc
