Clinical Cases in Augmentative and Alternative Communication Martine M. Smith, 2023-03-15 Clinical Cases in Augmentative and Alternative Communication provides a concise introduction to the rapidly expanding field of augmentative and alternative communication AAC. It brings together internationally renowned experts in the field to discuss its application and outline key principles of intervention to support communication using AAC. Carefully grounded in evidence-based clinical practice, the book highlights the diversity of potential applications for AAC across a wide range of client groups, including children and adults with developmental disabilities as well as adults with acquired impairments. Most of the chapters are structured as case reports following CARE guidelines and highlight key principles for intervention that are grounded in clinical practice. The chapters also include reflections on communication through AAC and the valuable contributions that AAC can make in supporting independence and enhancing quality of life. This accessible book is ideal reading for students, novice clinicians in the fields of speech and language therapy or pathology, and professionals who are new to this area of clinical practice.

Times of History, Times of Nature Anders Ekström, Staffan Bergwink, 2022-02-11 As climate change becomes an increasingly important part of public discourse, the relationship between time in nature and history is changing. Nature can no longer be considered a slow and immobile background to human history, and the future can no longer be viewed as open and detached from the past. *Times of History, Times of Nature* engages with this historical shift in temporal sensibilities through a combination of detailed case studies and synthesizing efforts. Focusing on the history of knowledge, media theory, and environmental humanities, this volume explores the rich and nuanced notions of time and temporality that have emerged in response to climate change.

Pathological Lives Steve Hinchliffe, Nick Bingham, John Allen, Simon Carter, 2016-12-21 Pandemics, epidemics, and food-borne diseases are a major global challenge. Focusing on the food and farming sector and mobilising social theory as well as empirical enquiry, *Pathological Lives* investigates current approaches to biosecurity and asks how pathological lives can be successfully regulated without making life more dangerous as a result. Uses empirical and social theoretical resources developed in the course of a 40-month research project entitled *Biosecurity Borderlands*. Focuses on the food and farming sector where the generation and subsequent transmission of disease has the ability to reach pandemic proportions. Demonstrates the importance of a geographical and spatial analysis, drawing together social, material, and biological approaches as well as national and international examples. The book makes three main conceptual contributions: reconceptualising disease as situated matters; the spatial or topological analysis of situations; and a reformulation of biopolitics. Uniquely brings together conceptual development with empirically and politically informed work on infectious and zoonotic disease to produce a timely and important contribution to both social science and to policy debate.

Cognitive Modeling in Perception and Memory J. G. W. Raaijmakers, Robert Goldstone, Mark Steyvers, Amy Criss, Robert Nosofsky, 2015-02-11 The work of Richard M. Shiffrin has highly impacted the field of cognitive science and

current developments within perception and memory have been influenced by his ideas In this volume several key figures in the field will comment on these developments and put them in a wider perspective Although many theories and models have been presented in recent years for various aspects of human cognition there have not been many comparative evaluations that focus on how these models have really advanced our understanding of the underlying mechanisms This volume will be a valuable source of information for both cognitive scientists working in the field and researchers and students looking for a clear accessible presentation of the key problems in cognitive science Highlighted sections include attention and perception memory functions and processes knowledge representation and semantics modelling approaches and applications

Encyclopedia of Image Processing Phillip A. Laplante, 2018-11-08 The Encyclopedia of Image Processing presents a vast collection of well written articles covering image processing fundamentals e g color theory fuzzy sets cryptography and applications e g geographic information systems traffic analysis forgery detection Image processing advances have enabled many applications in healthcare avionics robotics natural resource discovery and defense which makes this text a key asset for both academic and industrial libraries and applied scientists and engineers working in any field that utilizes image processing Written by experts from both academia and industry it is structured using the ACM Computing Classification System CCS first published in 1988 but most recently updated in 2012

Paradigm Changes Are Required in HIV Vaccine Research Marc H. V. Van Regenmortel, 2015-12-08 In his 1962 book *The Structure of Scientific Revolutions* Thomas Kuhn famously argued that researchers in every field of scientific enquiry always operate under a set of presuppositions known as paradigms that are rarely explicitly stated In the field of HIV vaccine research several prevailing paradigms led scientists for many years to pursue unfruitful lines of investigations that impeded significant progress The uncritical acceptance of reigning paradigms makes scientists reluctant to abandon their mistaken assumptions even when they obtain results that are not consistent with the paradigms The following five paradigms which disregard the degeneracy of the immune system were particularly harmful

- 1 There is a primary and intrinsic epitope specific for each B cell receptor and for the corresponding monoclonal antibody In reality there is no single intrinsic or real epitope for any antibody but only a diverse group of potential ligands
- 2 Reactions with monoclonal antibodies are more specific than the combined reactivity of polyclonal antibodies In reality a polyclonal antiserum has greater specificity for a multiepitopic protein because different antibodies in the antiserum recognize separate epitopes on the same protein giving rise to an additive specificity effect By focusing vaccine design on single epitope Mab pairs the beneficial neutralizing synergy that occurs with polyclonal antibody responses is overlooked
- 3 The HIV epitope identified by solving the crystallographic structure of a broadly neutralizing Mab HIV Env complex should be able when used as immunogen to elicit antibodies endowed with the same neutralizing capacity as the Mab Since every anti HIV bnMab is polyspecific the single epitope identified in the complex is not necessarily the one that elicited the bnMab Since hypermutated Mabs used in crystallographic studies differ from their germline like receptor version

present before somatic hypermutation the identified epitope will not be an effective vaccine immunogen 4 Effective vaccine immunogenicity can be predicted from the antigenic binding capacity of viral epitopes Most fragments of a viral antigen can induce antibodies that react with the immunogen but this is irrelevant for vaccination since these antibodies rarely recognize the cognate intact antigen and even more rarely neutralize the infectivity of the viral pathogen that harbors the antigen 5 The rational design of vaccine immunogens using reverse vaccinology is superior to the trial and error screening of vaccine candidates able to induce protective immunity One epitope can be designed to increase its structural complementarity to one particular bnMab but such antigen design is only masquerading as immunogen design because it is assumed that antigenic reactivity necessarily entails the immunogenic capacity to elicit neutralizing antibodies When HIV Env epitopes engineered to react with a bnMab are used to select from human donors rare memory B cells secreting bnAbs this represents antigen design and not immunogen design The aim of this Research Topic is to replace previous misleading paradigms by novel ones that better fit our current understanding of immunological specificity and will help HIV vaccine development

The Visual Life of Climate Change Saffron O'Neill, 2025-12-08 Available open access digitally under CC BY NC ND licence Images can play a key role in communication but climate change imagery can be formulaic and narrow in perspective Going beyond polar bears and wildfires this book is a manifesto for opening up the visual discourse on climate Rather than portraying scenarios that can be remote from many people's lives Saffron O'Neill shows how images can be powerful tools to engage viewers and enable them to connect different issues together With engaging case studies and practical advice throughout the book shows how visuals can represent climate change in more diverse equitable inclusive and responsible ways

Annals of the Carnegie Museum, 2013 Emergentist Approaches to Language Brian MacWhinney, Vera Kempe, Ping Li, Patricia J. Brooks, 2022-02-16 Government Reports Announcements & Index, 1984-10 **The Lost Ark** Karl Shuker, 1993 This is the first book to be devoted to the spectacular zoological discoveries and equally amazing rediscoveries of the twentieth century and it contains the only comprehensive collection of photographs of these species ever published It is a fascinating and encouraging book that provides good reason for believing that our world still holds many more surprises in store

Arts & Humanities Citation Index, 1994 A multidisciplinary index covering the journal literature of the arts and humanities It fully covers 1 144 of the world's leading arts and humanities journals and it indexes individually selected relevant items from over 6 800 major science and social science journals German books in print, 1975
