

Alternative Placement

The idea of an alternative navel piercing is becoming more and more appealing to consumers every day. Just as a traditional navel piercing is highly anatomy dependent, so is the inverse, horizontal and composed navel piercing. In fact, the suitability for these alternative navel piercings is even less likely than a traditional piercing, so much less likely, that it is a very rare piercing to perform.

In order for these alternative placements to be viable long term the navel needs to meet all of the same criteria as a traditional placement, but in the position that you wish to have pierced. This means that you still need a defined lower/side ridge.

These alternative placements for navel piercings are also more prone to rejection and migration as the sides and lower portion of the abdomen move substantially more than that of the upper mainline placement. It is imperative to remember that all navel piercings are surface piercings and as such in areas of high movements are again, much more prone to migration/rejection long term.

Note:

If you do have the anatomy and get your inverse navel pierced then please make sure the piercer places the jewelry correctly. If the piercer attempts to place a navel bar in your inverse navel with the jewelry in the same orientation as a traditional piercing, I highly recommend stopping the procedure and having a refund as this indicates that the piercer does not know what they are doing and you need to run for the hills!
