

## Cell Size

What determines the size of a cell?

### Why?

Sometimes bigger is better—tall basketball players, more closet space, and savings accounts may come to mind. What about cells? Does having big cells make an organism bigger or better? Would having larger cells be an advantage to an organism? If so, why do cells divide rather than continue growing? Maybe there is an advantage to being small.

### Model 1 – Investigating Cell Size

1. Are the cells shown in Model 1 plant or animal cells? Explain your answer.  
**ANIMAL – NO CELL WALL, CHLOROPLAST, LARGE CENTRAL VACUOLE**

2. Label Cell B in Model 1 with the following structures.

cell membrane

cytoplasm

nucleus

ribosomes

vacuole

mitochondria

3. Compare the smaller cell in Model 1 to the larger cell in Model 1.

a. Which cell has a larger surface area (more cell membrane surface)?

**CELL B (LARGER CELL) HAS A LARGER SURFACE AREA THAN CELL A.**

b. Which cell has more channels in its cell membrane that can transport molecules (nutrients, oxygen, and waste products) in and out of the cell?

**CELL B (LARGER CELL) HAS MORE CELL MEMBRANE CHANNELS THAN CELL A.**

**Programmed Cell Death** Yun Bo Shi, Yufang Shi, Yonghua Xu, David W. Scott, 2013-06-29 This volume contains papers that were presented and discussed at The 1996 International Symposium on Programmed Cell Death which was held in the Shanghai Science Center of the Chinese Academy of Sciences on September 8-12, 1996. Apoptosis has attracted great attention in the past several years. This is reflected in part by the exponential increase in the number of papers published on the subject. While several major scientific conferences have been held in recent years, this meeting represents the first major international scientific meeting on programmed cell death held in Asia where fast economic growth promises a bright future for both basic and applied research in biomedical sciences. We organized the meeting with the belief that such a gathering would foster a closer interaction between scientists from the West and those in Asia. Research on programmed cell death has expanded so extensively that no one meeting can cover all the important subjects related to apoptosis. The Shanghai meeting focused on several key areas ranging from well established ones such as cell death in the immune system to emerging ones such as the role of ECM in regulating cell fate. Specifically the subjects presented and discussed included programmed cell death during development, the regulation and biochemical mechanisms of lymphocyte apoptosis, the involvement of extracellular matrix and its remodeling in programmed cell death, genes that cause or prevent cell death and the application of apoptosis toward cancer therapy.      **CONAT 2016 International Congress of Automotive and Transport**

**Engineering** Anghel Chiru, Nicolae Ispas, 2016-10-31 The volume will include selected and reviewed papers from CONAT International Congress of Automotive and Transport Engineering to be held in Brasov, Romania, in October 2016. Authors are experts from research industry and universities coming from 14 countries worldwide. The papers are covering the latest developments in automotive vehicles and environment, advanced transport systems and road traffic, heavy and special vehicles, new materials, manufacturing technologies and logistics, accident research and analysis, and innovative solutions for automotive vehicles. The conference will be organized by SIAR Society of Automotive Engineers from Romania in cooperation with FISITA.      *Cancer Models* Michael Breitenbach, Jens Hoffmann, 2019-02-05 Cancer research like research on other diseases highly depends on representative and reliable model systems. In the Research Topic Cancer Models we collected original papers and review articles addressing the topic of tumor modeling from molecular biology, biochemistry, microorganisms, cells and organoids, fishes, animals and xenografts up to computational cancer models and patient data analysis. This representative eBook describes that there is not a single molecular defined tumor but rather a heterogenic and

highly variable complex of different individual diseases This is what makes research on cancer so difficult expensive and explains the broad number of models needed for research Our authors describe new next generation sequencing based methods to analyze complex patterns of chromosomal aberrations in order to understand the molecular biology of tumorigenesis as well as the role of cellular senescence and dormancy in the aetiology of tumor formation and development of therapy resistance of tumors The current developments on 3D cultures are thoroughly reviewed as these models help to overcome the current limitations of cell cultures and allow a more accurate mimicry of the native cancer tissue including cellular heterogeneity and restore specific biochemical and morphological Reviews about tumor models in zebrafish different transgenic mouse strains and pigs conclude the book In the final two chapters of this volume the authors discuss the theoretical and mathematical models developed in cancer research
