Modelling And Management Of Engineering Processes:

Modelling and Management of Engineering Processes Michael Schabacker, Kilian Gericke, Nikoletta Szélig, Sándor Vajna, 2014-09-01 Innovative processes for the development of products and services are more and more considered as an organisational capability which is recognised to be increasingly important for business success in today's competitive environment. However, management and academia need a more profound understanding of these processes and to develop improved management approaches to exploit such business potentials. This book contains the proceedings of the 3rd International Conference on Modelling and Management of Engineering Processes MMEP2013 held in Magdeburg, Germany, in November 2013. It includes contributions from international leading researchers in the fields of process modelling and process management. The conference topics were recent trends in modelling and management of engineering processes, potential synergies between different modelling approaches, future challenges for the management of engineering processes, as well as future research in these areas.

Modelling and Management of Engineering Processes Peter Heisig, P. John Clarkson, Sándor Vajna, 2011-03-23 Modelling for Business Improvement contains the proceedings of the First International Conference on Process Modelling and Process Management MMEP 2010 held in Cambridge, England, in March 2010. It contains contributions from an international group of leading researchers in the fields of process modelling and process management. This conference will showcase recent trends in the modelling and management of engineering processes, explore potential synergies between different modelling approaches, gather and discuss future challenges for the management of engineering processes, and discuss future research areas and topics. Modelling for Business Improvement is divided into three main parts: 1. Theoretical foundation of modelling and management of engineering processes and achievements in theory; 2. Experiences from management practice using various modelling methods and tools and their future challenges; 3. New perspectives on modelling methods, techniques, and tools.

Model Management and Analytics for Large Scale Systems Bedir Tekinerdogan, Önder Babur, Loek Cleophas, Mark van den Brand, Mehmet Aksit, 2019-09-14 Model Management and Analytics for Large Scale Systems covers the use of models and related artefacts such as metamodels and model transformations as central elements.

for tackling the complexity of building systems and managing data. With their increased use across diverse settings, the complexity, size, multiplicity, and variety of those artefacts has increased. Originally developed for software engineering, these approaches can now be used to simplify the analytics of large scale models and automate complex data analysis processes. Those in the field of data science will gain novel insights on the topic of model analytics that go beyond both model based development and data analytics. This book is aimed at both researchers and practitioners who are interested in model based development and the analytics of large scale models ranging from big data management and analytics to enterprise domains. The book could also be used in graduate courses on model development, data analytics, and data management. It identifies key problems and offers solution approaches and tools that have been developed or are necessary for model management and analytics. It explores basic theory and background, current research topics, related challenges, and the research directions for model management and analytics. It provides a complete overview of model management and analytics frameworks, the different types of analytics, descriptive, diagnostics, predictive, and prescriptive, the required modelling and method steps, and important future directions.

TraceME: A Traceability-Based Method for Conceptual Model Evolution Marcela Ruiz, 2018-05-03. This book presents TraceME, a traceability based method for conceptual model evolution whose general purpose is to support the evolution of information systems. By providing a set of four TraceME chunks, TraceME is situational oriented. In this way, it can be adapted to support different evolution projects by just assembling the TraceME chunks. To facilitate its industrial adoption, open source tools were developed and described which support the implementation of the TraceME chunks. The work presented highlights various research endeavors for the development of methods and techniques to automate the evolution of software systems. It explores the requirements engineering field as a steppingstone to a successful software development processes. In 2017, the underlying PhD dissertation won the CAiSE PhD award granted to outstanding PhD theses in the field of Information Systems Engineering.
