THE KIT (Electronic Drum Kit) OPERATING INSTRUCTIONS

Before using your Kit here are two important points to remember:-

(1) The Kit is **NOT** INTENDED FOR USE WITH DRUM STICKS

(2) The better the amplification used the better the sound. Drum sounds cover a very wide frequency range from very low (i.e. the bass drum), to the very high (i.e. the cymbals), and these will only be reproduced adequately through a full range (i.e. hi-fidelity) system. Instruments which such as bells which do not usually cover a wide enough frequency spectrum for best results. Again, R.I.D. R.I.D.

The drum sounds from "THE KIT" are produced electronically and have been designed to closely resemble the sound of a real drum set, all sounds are playable by the user with bass drum, snare drum, hi-hat, tom and ten tom bars being triggered from touch sensitive pads (i.e. the harder you hit the pad the louder the drum sound), the cymbals are controlled from touch sensitive pads which require only a light touch, three of these are provided for open hi-hat, closed hi-hat and variable cymbal control. Each sound has its own individual level control so that the overall mix of the drum kit can be adjusted to suit the requirements of the user. The bass drum may also be played from an optional foot pedal (available as an accessory).

VARIABLE CYMBAL

The tone or timbre of the cymbal has been made variable to give a range that can be used as either snare or ride cymbals, this range extends beyond these two uses to provide the user with a flexibility of sound limited only by his own imagination. The "pitch" and "decay" of the cymbal may also be adjusted for "internal preset controls".

HI-HAT

The hi-hat open and closed may either be played manually or by footman rapid operation of the unit can be automatically generated with controlled variations giving 28 high-hat rhythm combinations that are fully variable in tempo (see hi-hat rhythm chart). However when using the automatic facility it is not possible to use the manual controls for adding to or modifying the automatically generated pattern, and so giving an infinite number of possible hi-hat variations.

HI-HAT CONTROLS

Tempo:- Controls the tempo or speed of the automatic hi-hat rhythm with the first beat of each bar being indicated by the L.R.D.

Start/Stop:- Starts or stops the automatic hi-hat rhythm generator on the first beat of the bar. R.L.B. may also be foot controlled via the R.L.B. output socket. (Foot pedal available as an accessory).

Hi-hat pattern control:- Selects any one of the 28 hi-hat rhythm combinations (see hi-hat chart).

SR - LR switch:- Selects either SR or LR time signatures. By selecting SR the first complete beat of the SR bar is removed from hi-hat sound.

Decay - LR switch:- In the A position gives 4 closed hi-hat beats to the bar, in the B position gives 8 beats to the bar, in the C position adds every other SR beat to the basic 4 beat hi-hat. If the LR switch is to the bar increase tempo control to double the speed.
