**Matlab-Simulink-Based Compound Model Reference Adaptive Control for DC Motor** Marian Găiceanu, 2018 The objective of this chapter is to develop a compound Model Reference Adaptive Control MRAC of the dc motor by using the Matlab Simulink software The purpose of the chapter is to serve as a tutorial for the students or researchers in the field correlating step by step the presented theory with the Matlab Simulink programming environment The supraunitary relative degree model reference adaptive control is proposed as a solution to the parameters variation of the electric drives The numerical simulation results confirm the robustness of the proposed solution at unmodelled dynamics or parameter variation of the process The conventional control of the dc drive based on the cascaded loops is also treated in this chapter      *Adaptive Robust Control Systems* Anh Tuan Le, 2018-03-07 This book focuses on the applications of robust and adaptive control approaches to practical systems The proposed control systems hold two important features 1 The system is robust with the variation in plant parameters and disturbances 2 The system adapts to parametric uncertainties even in the unknown plant structure by self training and self estimating the unknown factors The various kinds of robust

adaptive controls represented in this book are composed of sliding mode control model reference adaptive control gain scheduling H infinity model predictive control fuzzy logic neural networks machine learning and so on The control objects are very abundant from cranes aircrafts and wind turbines to automobile medical and sport machines combustion engines and electrical machines
