Missile Datcom Steven R. Vukelich, Stan Stoy, Marvin Moore, 1988 The computer code is capable of addressing a wide variety of conventional missile designs For the purposes of this document a conventional missile is one which is comprised of the following An axisymmetric or elliptically shaped body One to four fin sets located along the body between the nose and base Each fin set can be comprised of one to eight identical panels attached around the body at a common longitudinal position and An airbreathing propulsion system To minimize the quantity of input data required commonly used values for many inputs are assumed as defaults However all program defaults can be over ridden by the user in order to more accurately model the configuration of interest
