Frontiers in the Acquisition of Literacy Claire M. Fletcher-Flinn,2015-09-28 Learning to read and to spell are two of the most important cultural skills that must be acquired by children and for that matter anyone learning a second language We are not born with an innate ability to read A reading system of mental representations that enables us to read must be formed in the brain Learning to read in alphabetic orthographies is the acquisition of such a system which links mental representations of visual symbols letters in print words with pre existing phonological sound and semantic comprehension cognitive systems for language Although spelling draws on the same representational knowledge base and is usually correlated with reading the acquisition processes involved are not quite the same Spelling requires the sequential production of letters in words and at beginning levels there may not be a full degree of integration of phonology with its representation by the orthography Reading on the other hand requires only the recognition of a word for pronunciation Hence spelling is more difficult than reading and learning to spell may necessitate more complete representations or more conscious access to them The learning processes that children use to acquire such cognitive systems in the brain and whether these same processes are universal across different languages and orthographies are central theoretical questions Most children learn to read and spell their language at the same time thus the co ordination of these two facets of literacy acquisition needs explication as well as the effect of different teaching approaches on acquisition Lack of progress in either reading and or spelling is also a major issue of concern for parents and teachers necessitating a cross disciplinary approach to the problem encompassing major efforts from researchers in neuroscience cognitive science experimental psychology and education The purpose of this Research Topic is to summarize and review what has been

accomplished so far and to further explore these general issues Contributions from different perspectives are welcomed and could include theoretical computational and empirical works that focus on the acquisition of literacy including cross orthographic research *Urban Resilience, Livability, and Climate Adaptation* Ilaria Pigliautile, Cristina Piselli, Hirushie Pramuditha Karunathilake, Claudia Fabiani, 2024-06-30 This book explores urban environments and their impact on resilience livability climate adaptation health and societal well being It provides interdisciplinary insights for fostering resilient livable and sustainable cities prioritizing well being and quality of life for all residents The book covers various topics and discusses innovative approaches for incorporating nature into urban planning It also examines the relationships between diet diversity food environments and transportation systems Spatial analysis of noise contour maps based on traffic speed is conducted along with an assessment of the impact of office environments on productivity The book explores the influence of streetscapes on anxiety envisions future cities from a youth perspective and identifies critical factors affecting the design and use of elevated urban spaces Daylighting performance in school expansions is evaluated and the concept of a livable city is examined Community adaptive capacity for climate resilient development is assessed through a case study analysis The livability of street vendors in different urban contexts is compared and alternative perspectives on restorative environments are presented The book investigates the impact of urban refugees on cities and reevaluates scientific theories for human well being oriented built environments It evaluates tourist satisfaction with urban railway systems and explores sport as a tool for healthy and sustainable cities **Evolutionary Computation & Swarm Intelligence** Fabio Caraffini, Valentino

Santucci, Alfredo Milani, 2020-11-25 The vast majority of real world problems can be expressed as an optimisation task by formulating an objective function also known as cost or fitness function The most logical methods to optimise such a function when 1 an analytical expression is not available 2 mathematical hypotheses do not hold and 3 the dimensionality of the problem or stringent real time requirements make it infeasible to find an exact solution mathematically are from the field of Evolutionary Computation EC and Swarm Intelligence SI The latter are broad and still growing subjects in Computer Science in the study of metaheuristic approaches i e those approaches which do not make any assumptions about the problem function inspired from natural phenomena such as in the first place the evolution process and the collaborative behaviours of groups of animals and communities respectively This book contains recent advances in the EC and SI fields covering most themes currently receiving a great deal of attention such as benchmarking and tuning of optimisation algorithms their algorithm design process and their application to solve challenging real world problems to face large scale domains
