CONSTRUCT A CLADOGRAM

You can think of a cladogram as an evolutionary family tree in which things that are more closely related share more characteristics. As an analogy, processes that have evolved due to new technologies can be organized using cladistics. For this activity, you will fill in a cladogram for methods of transportation.

Procedure

1. Think about the characteristics of the following methods of transportation: **bicycle, car, motorcycle, airplane, and on foot.**
2. Fill in your cladogram by filling in each method of transportation listed in Step 1 on the appropriate line at the top.

Analyze and Conclude

1. What "derived characters" are used in this cladogram?
2. Which mode of transportation may be considered an "outgroup"—a group that has none of the characteristics labeled on the cladogram?
3. A species that has evolved a new trait is not better than a species without that trait. Each species is just adapted to a certain way of life. When might riding a bike have an advantage over flying in an airplane?

CONSTRUCT ANOTHER CLADOGRAM

You are a scientist trying to determine the relationship between the organisms below. Using your knowledge of cladistics create a cladogram that represents how these animals are related. Draw each of the animals illustrated below on a separate sheet of paper to create your cladogram. (OR, you can cut them out and paste them.)

Analyze and Conclude

1. What derived characters did you use in your cladogram?
2. Which organism would be considered to be an "outgroup"? Why?

Romancing the Birds and Dinosaurs Alan Feduccia, 2020-10-15 Birds and dinosaurs have dominated human interest for decades In this well supported revolutionary view of the field critical questions are explored with credible evidence and biological thought Are birds derived directly from advanced dinosaurs or are they closely related dinosaur cousins Did flight originate via the natural gravity assisted trees down model or from the improbable gravity resisted ground up model Were the earliest birds ground predators or trunk climbing gliders Were dinosaurs hot blooded with insulating protofeathers or highly active cold blooded reptiles These are among the questions addressed in this path breaking book Current consensus suggests that early birds were earth bound and flight began on the ground Reversing that logic since birds are hot blooded by inference so too were dinosaurs and extraordinarily complex feathers flight brain and inner ear evolved before flight in dinosaurs The iconic early bird Archaeopteryx despite innumerable flight and arboreal features is now displayed as an earth bound predator that could not fly In reality we have yet to provide satisfactory explanations for much of the biological origin and early evolution of birds Among the questions addressed is whether truly feathered dinosaurs are in reality lost or hidden birds The architectural complexity of feathers leads the author to the conclusion that if an animal has evolved extraordinarily complex aerodynamically designed feathers an avian flight hand flight membranes and a flight brain it is a bird Birds and dinosaurs captivate and enchant the human imagination These intriguing animals have dominated the field of paleontology and evolution for the past half century engendering heated debate on avian ancestry the origin of flight and feathers and the biology of their fossils Are birds living dinosaurs In this series of entertainingly contentious and captivating essays evolutionary biologist Alan Feduccia writes with verve and humor to expose major problems in the field and advocate liberation from the shackles of consensus thinking about birds and dinosaurs He maintains that the euphoria of paleontologists claiming to have solved the major problems of bird evolution is premature largely generated by the adoption of a rigid cult like methodology heavily blended with ideology and excluding many biological and geological principles He adroitly exposes and elucidates major mistakes in the field and their aftermath Romancing the Birds and Dinosaurs is a lucid revelation of clarity and synthesis a fascinating unveiling of the underlying science that has produced the good but also often appalling fossil research and wild speculation in bird and dinosaur evolution A must read for anyone interested in this rapidly evolving field the short concise and incisive essays provide the reader with access to this complex topic **REVIEWS and WORDS OF PRAISE** In this strikingly unconventional and brilliant book Professor Alan Feduccia presents the current status of the recent controversy about the origin of birds with clarity and vigor A thought provoking personal exploration of what the bird fossils represent Sankar Chatterjee Paul Whitfield Horn Distinguished Professor of Geosciences and Curator of Paleontology Texas Tech University Feduccia's book eloquently reminds us that consensus science is to be shied away from

especially when it is used to plead special cases against basic scientific principles The concept of lost birds is particularly intriguing as it defines what birds are and how special science obfuscates the simplicity of evolution David A Burnham Associate Researcher University of Kansas Biodiversity Institute and Natural History Museum Based on a thorough understanding of the empirical evidence Feduccia presents a convincing account of avian origins from their putative ancestors Walter J Bock Professor of Evolutionary Biology Columbia University and Research Associate American Museum of Natural History With candor clear thinking humor and abundant evidence Alan Feduccia's *Romancing the Birds and Dinosaurs* should be mandatory reading for the countless millions who are intrigued by dinosaurs and their relatives the birds Feduccia points out the many empirical and logical shortcomings in the stubborn majority view that birds evolved from dinosaurs an idea now solidly entrenched as dogma in education and popular culture This new book will be as interesting to those who study human behavior and scientific methods as it will to students of vertebrate evolution David W Steadman Curator of Ornithology Professor of Biology Florida Museum of Natural History University of Florida
