**Proceedings of the Second International Conference on Computer and Communication Technologies** Suresh Chandra Satapathy, K. Srujan Raju, Jyotsna Kumar Mandal, Vikrant Bhateja, 2015-09-03 The book is about all aspects of computing communication general sciences and educational research covered at the Second International Conference on Computer Communication Technologies held during 24-26 July 2015 at Hyderabad. It is hosted by CMR Technical Campus in association with Division V Education Research CSI India. After a rigorous review, only quality papers are selected and included in this book. The entire book is divided into three volumes. Three volumes cover a variety of topics which include medical imaging, networks, data mining, intelligent computing, software design, image processing, mobile computing, digital signals and speech processing, video surveillance and processing, web mining, wireless sensor networks, circuit analysis, fuzzy systems, antenna and communication systems, biomedical signal processing and applications, cloud computing, embedded systems, applications and cyber security, and digital forensic. The readers of these volumes will be highly benefited from the technical contents of the topics. *Control and Optimization of Distributed Generation Systems* Magdi S. Mahmoud, Fouad M. AL-Sunni, 2015-05-14 This text is an introduction to the use of control in distributed power generation. It shows the reader how reliable control can be achieved so as to realize the potential of small networks of diverse energy sources either singly or in coordination for meeting concerns of energy cost, energy security, and environmental protection. The book demonstrates how such microgrids interconnecting groups of generating units and loads within a local area can be an effective means of balancing electrical supply and demand. It takes advantage of the ability to connect and disconnect microgrids from the main body of the power grid to give flexibility in response to special events, planned or unplanned. In order to capture the main opportunities for expanding the power grid and to present the plethora of associated open problems in control theory, *Control and Optimization of Distributed Generation Systems* is organized to treat three key themes, namely, system architecture and integration, modelling and analysis, and communications and control. Each chapter makes use of examples and simulations and appropriate problems to help the reader study. Tools helpful to the reader in accessing the mathematical analysis presented within the main body of the book are given in an appendix. *Control and Optimization of Distributed Generation Systems* will enable readers new to the field of distributed power generation and networked control, whether experienced academic, migrating from another field, or graduate student beginning a research career, to familiarize themselves with the important points of the control and regulation of microgrids. It will also be useful for practising power engineers wishing to keep abreast of changes in power grids necessitated by the diversification of generating methods. *Biomechatronics: Harmonizing Mechatronic Systems with Human Beings* Dingguo Zhang, Venketesh Dubey, Wenwei Yu, Kin Huat Low, 2019-02-05 This eBook provides a comprehensive treatise on modern biomechatronic systems centred around human applications. A particular emphasis is given to exoskeleton designs for assistance and training with advanced interfaces in

human machine interaction Some of these designs are validated with experimental results which the reader will find very informative as building blocks for designing such systems This eBook will be ideally suited to those researching in biomechatronic area with bio feedback applications or those who are involved in high end research on man machine interfaces This may also serve as a textbook for biomechatronic design at post graduate level *Computational Intelligence in Cancer Diagnosis* Janmenjoy Nayak,Danilo Pelusi,Bighnaraj Naik,Manohar Mishra,Khan Muhammad,David Al-Dabass,2023-04-12 *Computational Intelligence in Cancer Diagnosis* Progress and Challenges provides insights into the current strength and weaknesses of different applications and research findings on computational intelligence in cancer research The book improves the exchange of ideas and coherence among various computational intelligence methods and enhances the relevance and exploitation of application areas for both experienced and novice end users Topics discussed include neural networks fuzzy logic connectionist systems genetic algorithms evolutionary computation cellular automata self organizing systems soft computing fuzzy systems and hybrid intelligent systems The book s chapters are written by international experts from both cancer research oncology and computational sides to cover different aspects and make it comprehensible for readers with no background on informatics Contains updated information about advanced computational intelligence spanning the areas of neural networks fuzzy logic connectionist systems genetic algorithms evolutionary computation cellular automata self organizing systems soft computing fuzzy systems and hybrid intelligent systems in diagnosing cancer diseases Discusses several cancer types including their detection treatment and prevention Presents case studies that illustrate the applications of intelligent computing in data analysis to help readers to analyze and advance their research in cancer **Robust Monitoring, Diagnostic Methods and Tools for Engineered Systems** Eleni N.
