Matter and Interactions I Ruth W. Chabay, Bruce A. Sherwood, 2007 The overall goal of this calculus based text is to provide an introduction to physics with a modern point of view. It emphasizes the atomic nature of matter.

macro micro connections and modeling complex physical systems The approach is designed to go beyond low level physics and to build upon readers prior preparation The first volume deals with mechanics and thermal physics in a unified way with strong emphasis on atomic level description and analysis The ball and spring model of solids is a major theme culminating in computing the specific heat as a function of temperature for an Einstein solid using the concepts of statistical mechanics

Matter and Interactions II Ruth W. Chabay, Bruce A. Sherwood, 2002 A modern introduction to physics for advanced students this work focuses on the atomic structure of the material plus the links between macroscopic and microscopic phenomena Above all readers learn how to explain complex physical processes using simple models This second volume deals with the theory of electricity and magnetism as well as physical optics as understood by the classical interaction between light and material Electrostatics and currents are discussed in a simplified way using the electrical field and microscopic models

Condensed-Phase Molecular Spectroscopy and Photophysics Anne Myers Kelley, 2022-09-27 Condensed Phase Molecular Spectroscopy and Photophysics An introduction to one of the fundamental tools in chemical research spectroscopy and photophysics in condensed phase and extended systems Condensed Phase Molecular Spectroscopy and Photophysics comprehensively covers radiation matter interactions for molecules in condensed phases along with metallic and semiconductor nanostructures examining optical processes in extended systems such as metals semiconductors and conducting polymers and addressing the unique optical properties of nanoscale systems The text differs from others through its emphasis on the molecule environment interactions that strongly influence spectra in condensed phases including spectroscopy and photophysics of molecular aggregates molecular solids and metals and semiconductors as well as more modern topics such as two dimensional and single molecule spectroscopy To aid in reader comprehension the text includes case studies and illustrated examples An online manual with solutions to the problems in the book is available to all readers on a companion website Condensed Phase Molecular Spectroscopy and Photophysics begins with an introduction to quantum mechanics that sets a solid foundation for understanding the text s subsequent topics including Electromagnetic radiation and radiation matter interactions molecular vibrations and infrared spectroscopy and electronic spectroscopy Photophysical processes and light scattering nonlinear and pump probe spectroscopies and electron transfer processes Basic rotational spectroscopy and statistical mechanics Raman scattering 2D and single molecule spectroscopies and time domain pictures of steady state spectroscopies Time independent quantum mechanics statistical mechanics group theory radiation matter interactions and system bath interactions Atomic spectroscopy photophysical processes light scattering nonlinear and pump probe spectroscopies two dimensional spectroscopies and metals and plasmons Written for researchers and upper level undergraduate and graduate courses in physical and materials chemistry Condensed Phase Molecular Spectroscopy and Photophysics is a valuable learning resource that is uniquely designed to equip readers to solve a broad array of current problems and challenges in the vast field of chemistry
