Task 1: Build the PasswordChecker class

• Create class "P"

• Add class to P

• This program implements a simple but strict password checker program. The password checker (P) has the following methods:

• `__init__(self)`

```

    def __init__(self):
        self.password = ""
        self.length = 0
        self.valid = False
        self.__password_checker()
    
```

•

`__password_checker(self)` checks whether the password is valid or not. It returns True if the password is valid, False otherwise.
