July 20issue Ethanol Report:

Ending Dirty Energy Policy Joseph P. Tomain, 2011-06-20 Climate change presents the United States and the world with regulatory problems of a magnitude complexity and scope unseen before The United States however particularly after the mid term elections of 2010 lacks the political will necessary to aggressively address climate change Most current books focus on climate change Ending Dirty Energy Policy argues that the US will not adequately address climate change until it transforms its fossil fuel energy policy Yet there are signs that the country will support the transformation of its century old energy policy from one that is dependent on fossil fuels to a low carbon energy portfolio A transformative energy policy that favors energy efficiency and renewable resources can occur only after the US has abandoned the traditional fossil fuel energy policy has redesigned regulatory systems to open new markets and promoted competition among new energy providers and has stimulated private sector commercial and venture capital investment in energy innovations that can be brought to commercial scale and marketability The Eastern Pharmacist, 1963 **Government reports annual index**

Congress Brent D. Yacobucci, Congressional Research Service: The Libr, Jasper Womach, 2013-11 In light of a changing regulatory and legislative environment concern has arisen regarding the future prospects for ethanol as a motor fuel Ethanol is produced from biomass mainly corn and is mixed with gasoline to produce cleaner burning fuel called gasohol or E10 The market for fuel ethanol which consumes 10 % of the nation s corn crop is heavily dependent on federal subsidies and regulations A major impetus to the use of fuel ethanol has been the exemption that it receives from the motor fuels excise tax Ethanol is expensive relative to gasoline but it is subject to a federal tax exemption of 5 2 cents per gallon of gasohol or 52 cents per gallon of pure ethanol This exemption brings the cost of pure ethanol which is higher than that of conventional gasoline and other oxygenates within reach of the cost of competitive substances In addition there are other incentives such as a small ethanol producers tax credit It has been argued that the fuel ethanol industry could scarcely survive without these incentives The Clean Air Act requires that ethanol or another oxygenate be mixed with gasoline in areas with excessive carbon monoxide or ozone pollution The resulting fuels are called *Production of Ethanol from Refinery Waste Gases* D.
