Sustainable Renovation Lisa Gelfand, Chris Duncan, 2011-11-18 The complete resource on performing sustainable renovations for both Historic and modern existing buildings This forward looking and insightful guide explores how the sustainable renovation of existing buildings presents great opportunities for initiating extensive changes in the performance of the built environment Great examples of existing building upgrades are examined illustrating how to do sustainable renovations along with current design approaches for radically improving the functionality of existing prewar postwar and late modern buildings Sustainable Renovation saves its key focus for institutional and commercial buildings but discusses the challenges they pose within a global scope that encompasses all building practices Some of the discussions in this book include The significance of energy and resource demands by the building sector and the urgency of reducing loads in existing buildings Management design and construction approaches to achieve major modernization in occupied buildings International case studies that focus on methods and benefits of successful sustainable transformations of existing building performance Repurposing buildings to preserve style and add performance remains a work in progress as designers and builders discover new methods for improving sustainable practices and standards With incremental modernization and operations strategies available for immediate implementation this book demonstrates the different ways of thinking necessary when considering and attempting the integration of sustainable concepts into existing buildings and enables readers to rethink the world that's built around them

Transient Airflow in Building Drainage Systems John Swaffield, 2010-04-27 Giving you the first comprehensive presentation of the ground breaking research undertaken at Heriot Watt University with Research Council and industrial funding this book brings a new perspective to the design of building drainage and vent systems It provides the building services community with clear and verifiable design methods that will be robust enough to meet challenges such as climate change and water conservation population migration to the mega cities of the developing world and the consequent pressures of user concentration the rise of the prestige building and the introduction of new appliances and control strategies These all combine to make traditional codified design guidance insufficient Many assumptions in existing codes defining the entrained airflows within building drainage vent systems cannot be theoretically supported so designers concerned with these systems need analysis and simulation capabilities which are at

least as reliable as those enjoyed by other building services practitioners The Method of Characteristics solution techniques which are well established in the pressure surge field are now used to provide solutions for drainage designers The material is applied to a whole range of abstract scenarios then to a series of real world applications including the forensic modelling of the SARS virus spread within Amoy Gardens in 2003 and the refurbishment of the O2 Dome Applications to specialised services including underground station drainage and highly infectious disease treatment facilities are discussed and demonstrated alongside the use of design and simulation techniques in support of product development Aimed at both professional and academic users this book serves both as a design aid and as a core text for specialist masters courses in public health and building services engineering
