We Provide Tools and Basic Information for Learning Process Instrumentation and Control Engineering.

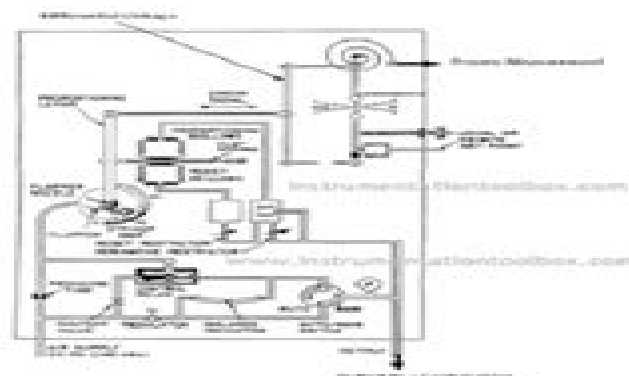

How the Foxboro 43AP Pneumatic Controller Works

The Foxboro 43AP pneumatic controller is a versatile process instrument controller that can be used to control pressure, temperature, flow and level. As with all process controllers, the Foxboro 43AP pneumatic controller continuously detects the difference between a process measurement and its set point, and produces an output air signal that is a function of this difference and the type of control.

Controller Loop for a Pneumatic Controller

The output signal is transmitted to a control valve or other control device. The process measurement, set point, and output signal are indicated on the controller.
