Chapter 1 (Introduction)

Exercise 1.1

Since $f(\cdot)$ is convex we have that

$$f(\lambda x + (1 - \lambda)y) \leq \lambda f(x) + (1 - \lambda)f(y) . \quad (1)$$

Since $f(\cdot)$ is concave we also have that

$$f(\lambda x + (1 - \lambda)y) \geq \lambda f(x) + (1 - \lambda)f(y) . \quad (2)$$

Combining these two expressions we have that f must satisfy each with equality or

$$f(\lambda x + (1 - \lambda)y) = \lambda f(x) + (1 - \lambda)f(y) . \quad (3)$$

This implies that f must be linear and the expression given in the book holds.

Modeling and Optimization of Interdependent Energy Infrastructures Wei Wei, Jianhui Wang, 2019-10-22 This book opens up new ways to develop mathematical models and optimization methods for interdependent energy infrastructures ranging from the electricity network natural gas network district heating network and electrified transportation network The authors provide methods to help analyze design and operate the integrated energy system more efficiently and reliably and constitute a foundational basis for decision support tools for the next generation energy network Chapters present new operation models of the coupled energy infrastructure and the application of new methodologies including convex optimization robust optimization and equilibrium constrained optimization Four appendices provide students and researchers with helpful tutorials on advanced optimization methods Basics of Linear and Conic Programs Formulation Tricks in Integer Programming Basics of Robust Optimization Equilibrium Problems This book provides theoretical foundation and technical applications for energy system integration and the interdisciplinary research presented will be useful to readers in many fields including electrical engineering civil engineering and industrial engineering *Solutions Manual for Linear Programming* Vasek Chvatal, 1984-06-01 Optimization in Engineering Ramteen Sioshansi, Antonio J. Conejo, 2017-06-24 This textbook covers the fundamentals of optimization including linear mixed integer linear nonlinear and dynamic optimization techniques with a clear engineering focus It carefully describes classical optimization models and algorithms using an engineering problem solving perspective and emphasizes modeling issues using many real world examples related to a variety of application areas Providing an appropriate blend of practical applications and optimization theory makes the text useful to both practitioners and students and gives the reader a good sense of the power of optimization and the potential difficulties in applying optimization to modeling real world systems The book is intended for undergraduate and graduate level teaching in industrial engineering and other engineering specialties It is also of use to industry practitioners due to the inclusion of real world applications opening the door to advanced courses on both modeling and algorithm development within the industrial engineering and operations research fields **Principles and Practice of Constraint Programming - CP'99** Joxan Jaffar, 2004-06-02 This book constitutes the refereed proceedings of the 5th International Conference on Principles and Practice of Constraint Programming CP 99 held in Alexandria Virginia USA in October 1999 The 30 revised full papers presented together with three invited papers and eight posters were carefully reviewed and selected for inclusion in the book from a total of 97 papers submitted All current aspects of constraint programming and applications in various areas are addressed Linear Optimization and Extensions Dimitris Alevras, Manfred W. Padberg, 2012-12-06 Books on a technical topic like linear programming without exercises ignore the principal beneficiary of the endeavor of writing a book namely the student who learns best by doing course Books with exercises if they are challenging or at least to some extent so exercises of need a solutions manual so that students can have recourse to it when

they need it Here we give solutions to all exercises and case studies of M Padberg s Linear Optimization and Extensions second edition Springer Verlag Berlin 1999 In addition we have included several new exercises and taken the opportunity to correct and change some of the exercises of the book Here and in the main text of the present volume the terms book text etc designate the second edition of Padberg s LPbook and the page and formula references refer to that edition as well All new and changed exercises are marked by a star in this volume The changes that we have made in the original exercises are inconsequential for the main part of the original text where several of the exercises especially in Chapter 9 are used on several occasions in the proof arguments None of the exercises that are used in the estimations etc have been changed
