Linde Hydraulic Control (LHC)

Digital electro-hydraulic controller

Instead of a control unit, an integrated module has taken the place of the control technology. Instead of a hydraulic controller, a computer electronic controller is used with a very powerful microcontroller system, all control functions for the drive unit and the working hydraulics (2).

Adaptation to various trucks

The electronic control unit is capable of controlling trucks from a variety of series and with different drive systems. To use different truck parameters and sensors, each truck model has a code that uniquely identifies the truck.

Troubleshooting

The processor of the electronic control unit analyzes analogue and digital signals. The processor recognizes digital malfunctions and system errors, and displays an error message on the display/monitor on the control interface. In addition, the control unit activates a variety of functions according to the error's highest priority.

- Working light failure
- Non-secure detection of the manual emergency stop
- The truck brakes with automatic emergency stop and all hydraulic valves
- The manual brake on the emergency function has manual emergency stop activated
- An error code appears on display

These malfunctions can be corrected by switching off the emergency stop and the stop switch. During a fault, the control unit shows whether the error is still present. If the error is no longer present, the truck resumes normal operation. If the error persists, the error code appears on the display and one of the measures listed above is carried out.

Changing the controller

4.1.1.1.1.1.1

Problems regarding component damage due to electrostatic discharge (ESD) damage to working elements will occur if the controller is moved.

The controller is equipped with a "float plug" which is attached to the back to avoid static damage. Connections must never be left open. The upper part of the controller and the software version of the controller can be read out via the back connector.

If the controller is replaced, the personnel work unit controller must be identified and plug adapted to the code factory. All necessary information is available on the code factory.
