LENI 

Abstract The purpose of this study was to determine the effect of a 12-week, 100% body weight (BW) resistance training program on the muscle strength and body composition of sedentary, middle-aged women. The subjects were randomly assigned to either a resistance training (RT) or control (CON) group. The RT group performed a 12-week, 100% BW resistance training program, while the CON group performed no exercise. The RT group showed significant increases in muscle strength and body composition, while the CON group showed no significant changes. The results of this study suggest that a 12-week, 100% BW resistance training program is effective in improving muscle strength and body composition in sedentary, middle-aged women.
