Laboratory Measure of Cheating Predicts Misbehavior at School Alain Cohn, 2017 Laboratory experiments provide insights into the drivers of cheating behaviour but it is unclear to what extent cheating in the lab generalizes to the field We conducted an experiment with middle and high school students to test whether a common laboratory measure of cheating predicts three types of school misconduct i disruptiveness in class ii homework noncompletion and iii absenteeism We find that students who cheat in the experimental task are more likely to misbehave at school suggesting that experimental measures of cheating generalize to rule violating behaviour in naturally occurring environments
