A Parametric Framework for Modelling of Bioelectrical Signals Yar M. Mughal, 2016-01-05 This book examines non invasive electrical based methods for disease diagnosis and assessment of heart function In particular a

formalized signal model is proposed since this offers several advantages over methods that rely on measured data alone By using a formalized representation the parameters of the signal model can be easily manipulated and or modified thus providing mechanisms that allow researchers to reproduce and control such signals In addition having such a formalized signal model makes it possible to develop computer tools that can be used for manipulating and understanding how signal changes result from various heart conditions as well as for generating input signals for experimenting with and evaluating the performance of e g signal extraction methods The work focuses on bioelectrical information particularly electrical bio impedance EBI Once the EBI has been measured the corresponding signals have to be modelled for analysis This requires a structured approach in order to move from real measured data to the model of the corresponding signals This book proposes a generic framework for this procedure It can be used as a guide for modelling impedance cardiography ICG and impedance respirography IRG signals as well as for developing the corresponding bio impedance signal simulator BISS

Integration as Solution for Advanced Smart Urban Transport Systems Grzegorz Sierpiński, 2018-08-25 Methods of advanced data collecting and their analysis models which help with decision problems as well as technical solutions which improve the integrity of contemporary transport systems at urban area are only some of many problems connected with integration in passenger and freight transport which have been discussed in this book The book expresses case study based scientific and practical approach to the problems of contemporary transport systems The proposed methods and models enable a system approach to assess current solutions In turn implementation proposals may support the improvement of the integrity of individual elements of transport systems and thus increase its effectiveness on the global scale With regard to the research results discussed and the selected solutions applied the book primarily addresses the needs of three target groups Scientists and researchers ITS field Local authorities responsible for the transport systems at the urban and regional level Representatives of business traffic strategy management and industry manufacturers of ITS components This book gathers selected papers presented at the 15th Scientific and Technical Conference Transport Systems Theory and Practice organised by the Department of Transport Systems and Traffic Engineering at the Faculty of Transport of the Silesian University of Technology The conference was held in Katowice Poland on September 17 19 2018
