The natural gas shipping industry in cross sea of the global circumstances Ulrike Niemann,2016-02-10 Master s Thesis from the year 2015 in the subject Business economics Miscellaneous grade 10 0 University of Southern Denmark Department of Business and Social Sciences course Business economics International Business Management language English abstract Shipping of natural gas across the oceans is of significant importance linking the energy production business with the consuming nations around the globe Natural gas supply is predicted to increment 1 9% p a until 2035 therewith facilitating its transportation as a commodity on board of currently 415 liquefied natural gas vessels and further 168 more to come by 2020 Despite its comparably small size of not even one percent of the worldwide merchant fleet within the industry of shipping the carriage of natural gas on board of vessels has been overall on an upwind within the last twenty years foremost due to the greater discovery of natural gas as a source of energy and an increased demand for energy resources in general Particularly the natural gas shipping industry underlies peculiar states of affairs It is a highly technologized investment intense segment which is affected by currents of political economic and environmental origin Hence natural gas shipowners as well as other participants upstream and downstream of this sector find themselves in difficulty of strategic decision making The purpose for this study has therefore been to investigate in how a natural gas shipping company and other market participants can take a farsighted strategic decision in the complex and uncertain business environment of today and thereby planning for the future By using the scenario approach of modelling a complex world in single happenings it will be thought deeply and creatively about the future whereof the most salient factors affecting this industry are illuminated Upon these scenarios various economic theories and models including an equation of natural gas ships demand are applied whose concepts could be exercised by market participants in order to adapt to ever changing circumstances with vigilance and to reduce the risk of being unprepared for the future The study found that the global natural gas industry is impacted by the dynamics deriving from conditions enforced by for instance the ongoing financial and economic crisis legislative forces

substitutionary effects of energy products and political discord in natural gas providing as well as receiving countries The outer firm global contexts leave a footprint on the strategic decision making of a firm In addition it was proofed that scenario conduction is a viable tool for strategic planning of a firm active in the natural gas shipping field in order to address the business

Absolute and relative gains in the American decision to release nuclear weapons over Hiroshima and Nagasaki Joe Majerus, 2014-11-11 Master s Thesis from the year 2014 in the subject Politics General and Theories of International Politics grade 80 100 University of Leicester Department of Politics and International Relations course International Relations language English abstract The question of whether states pursue absolute or relative gains in international politics has divided neo realism and neo liberalism for quite some time now Thus whereas neo realists contend that states seek comparative advantages relative to other actors neo liberal scholars argue that they are primarily interested in the accomplishment of absolute individual gains In applying social constructivist ideas however this paper will attempt to demonstrate that such a preference for relative or absolute gains is not naturally predetermined but inextricably linked to the continual re construction of states national identities and interests In other words it is political actors own conception and definition of international relations which ultimately determines their concern for absolute or relative gains By analyzing the decision making process of the Truman Administration for using nuclear weapons against the Japanese cities of Hiroshima and Nagasaki in August 1945 this case study will show that American leaders were altogether much more preoccupied with achieving absolute rather than relative gains Such absolute considerations were simultaneously influenced by the pressures of an anarchic self help system as well as by specific domestic imperatives and the personal views of individual policy makers on how to best handle international problems and exigencies More concretely American decision makers believed that only the realization of absolute gains such as swift socio economic recovery and the creation of a more stable and peaceful security environment would ultimately ensure their country s long term international position in both absolute and relative terms
