- 1 The particles in copper are vibrating about a fixed point. As the temperature increases, they gain kinetic energy and vibrate more, colliding with neighbouring particles. This has the effect of increasing the overall volume of the metal. In other words, it expands.

#### Page 7

- 2 The particles in gases have much weaker forces of attraction between their particles as the particles are already further away from each other compared with those in a solid. These weaker forces of attraction are more easily broken as temperatures rise, allowing the particles to move away from one another more easily.
