General Report ... New York (N.Y.). Department of Parks,1906 Pattern Analysis Heinrich Niemann,1981-07 This book is devoted to pattern analysis that is the automatic construction of a symbolic description for a complex pattern like an image or connected speech Pattern analysis thus tries to simulate certain capabilities which go without saying in any human central nervous system The increasing interest and growing efforts at solving the problems related with pattern analysis are motivated by the challenge of the problem and the expected applications Potential applications are numerous and result from the fact that data can be gathered and stored by modern devices in ever increasing extent thus making the finding of particular interesting facts or events in these hosts of data an ever increasing problem It was tried to organize the book around one particular view of pattern analysis the view that pattern analysis requires an appropriate set of modules operating on a common data base which contains intermediate results of processing Although other views are certainly possible this one was adopted because the author feels that it is a useful idea because the size of this book had to

be kept within reasonable bounds and because it facilitated the composition of fairly self contained chapters 1998
