Pervasive Computing Patrik Florén, Antonio Krüger, Mirjana Spasojevic, 2010-04-23 Welcome to the proceedings of the 8 International Conference on Pervasive Computing Pervasive 2010 After Toronto Sydney and Nara the conference has now returned to Europe Pervasive is one of the most important conferences in the area of pervasive and ubiquitous computing As in the previous year we had two categories of technical papers Full Papers and Notes Pervasive attracted 157 valid submissions from which the Technical Program Committee TPC accepted 24 full papers and one note resulting in an overall acceptance rate of 16% The submissions included 628 authors from 27 countries representing all the continents

except Antarctica As we can see from these figures Pervasive is a truly global highly competitive conference A major conference such as Pervasive requires a rigorous and objective process for selecting papers This starts with the selection of a high quality TPC We were fortunate to be able to draw on the wisdom and experience of our 28 TPC members from the most prestigious universities and research labs in North America and Asia This committee was aided by the input of no less than 238 external reviewers chosen on the basis of their domain knowledge and relevance to pervasive computing The papers were selected using a double blind review with four peer reviews per paper and a discussion phase among the reviewers and a discussion of the papers in the TPC meeting which was held in Palo Alto during December 12-13 2009 We thank Nokia Research Center for hosting the meeting

How the Brain Processes Multimodal Technical Instructions Dirk Remley, 2016-12-05 While Aristotle acknowledges the connection between rhetoric biology and cognitive abilities scholarship continues to struggle to integrate the fields of rhetoric and neurobiology Drawing on recent work in neuro-rhetoric this book offers a model that integrates multimodal rhetorical theory and multisensory neural processing theory pertaining to cognition and learning Using existing theories from multimodal rhetoric and specific findings from neurobiological studies the author develops a model that integrates concepts from both fields bridging if not uniting them He also discusses possible applications of the new model with specific case studies related to training and instruction These applications include various media used in instructional and training contexts such as print slide shows videos simulations and hands on training The book thus introduces concepts of cognitive neuroscience to multimodal rhetorical theory and facilitates theorization combining multimodal rhetoric and multisensory cognition and serves as a vehicle by which readers can better understand the links between multimodal rhetoric and cognitive neuroscience associated with technical communication Integrating case studies from industry and practice the text makes explicit connections between academic scholarship and workplace preparation It also describes how interdisciplinary research can contribute to pharmaceutical research as well as the development of productive instructional materials Rhetoric is affected by how the brain of any member of a given audience can process information This book can promote further research qualitative and quantitative to develop a better understanding of the relationship between multimodal messages and how the brain processes such information
