What Is Life? A Guide to Biology W/Prep-U Jay Phelan, 2009-04-30 Jay Phelan's *What is Life A Guide to Biology* is written in a delightfully readable style that communicates complex ideas to non biology majors in a clear and approachable manner. After reading Phelan's book students will understand why they would want to know and talk about science. His skillful style includes asking stimulating questions called Q questions which encourage the student to keep reading to find the answer and will illuminate just how relevant science is to their life.

*Evolution for Young Minds* An *Evolution and Natural Selection Guide for Children* is a fun informative and fresh approach to the teaching of evolution. Learn all about the amazing gene and how it controls the way humans, plants and animals look and behave. Discover how evolution and natural selection over millions of years have populated Earth with life both big and small. Get to know Lamarck, Darwin and Wallace three clever scientists from history who came upon a truly unique idea. Carry out a natural selection experiment and learn why scientists smile a lot when they find a very old fossil. This is a book that will delight and entertain while preparing kids for a lifetime of passion for the study of science. Flemming Bermann grew up in Denmark and currently lives in Southampton UK where he is a development manager for a software house. He was inspired to write *Evolution for Young Minds* by his wish to share knowledge with a young audience whom he hopes will be inspired to take an interest in the natural world around them. **Darwin-Inspired Learning** Carolyn J. Boulter, Michael J. Reiss, Dawn L. Sanders, 2015-01-19 Charles Darwin has been extensively analysed and written about as a scientist, Victorian father and husband. However this is the first book to present a carefully thought out pedagogical approach to learning that is centered on Darwin's life and scientific practice. The ways in which Darwin developed his scientific ideas and their far reaching effects continue to challenge and provoke contemporary teachers and learners inspiring them to consider both how scientists work and how individual humans read nature. *Darwin inspired learning* as proposed in this international collection of essays is an enquiry based pedagogy that takes the professional practice of Charles Darwin as its source. Without seeking to idealise the man, *Darwin inspired learning* places importance on active learning, hands on enquiry, critical thinking, creativity, argumentation, interdisciplinarity. In an increasingly urbanised world first hand observations of living plants and animals are becoming rarer. Indeed some commentators suggest that such encounters are under threat and children are living in a time of nature deficit. *Darwin inspired learning* with its focus on close observation and hands on enquiry seeks to re-engage children and young people with the living world through critical and creative thinking modeled on Darwin's life and science.
