Nature Journal Impact Factor:

Unreliable Csaba Szabo, 2025-03-11 Reproducibility is fundamental to the scientific method. After reading a paper describing research findings, a scientist should be able to repeat the experiment and obtain the same results. Yet an alarming number, perhaps as high as 90 percent of published biomedical research papers, face challenges in independent replication. Such issues range from honest mistakes to outright fraud. The scope of this crisis, however, underscores deeper systemic issues within the scientific community: its culture, incentives, and institutions. In *Unreliable*, the distinguished scientist Csaba Szabo examines the causes and consequences of the reproducibility crisis in biomedical research, showing why the factors that encourage misconduct stem from flaws in real-world science. There are many culprits, including commonplace research methods and dubious statistical techniques. Academic career incentives, hypercompetition for grant funding, and a bias toward publishing positive results have exacerbated the problem. Deliberate data manipulation and fabricated findings, churned out by paper mills, are disturbingly common. Academic institutions and publishers, for their part, have perpetuated a culture of impunity. Szabo explores how these failures have hindered scientific progress and impeded the development of new treatments, and he introduces readers to the science sleuths who tirelessly uncover misconduct. He proposes comprehensive reforms, from scientific training to the grant system, through the publication process, to address the root causes of the crisis. Written in clear language and leavened with a keen sense of irony, *Unreliable* is an essential account of the reproducibility crisis that gives readers an inside look at how science is actually done.

The Nature of Scientific Innovation, Volume I

David Dent, 2024-12-01 Innovation is a major driver of social, economic, and environmental change and is researched extensively by academics from disciplines as diverse as business, engineering, economics, sociology, and psychology. On the whole, each discipline pursues its own pathway to understanding without an interdisciplinary framework that links diverse research outputs. This partite structure creates a remove from the practical realities of entrepreneurship and the innovators who operate and perceive innovation in its entirety. This book delivers insights and creates a different framework, one that includes terminologies and typologies, greater understanding of paradigmatic influences in science, needs vs. wants, and demand, impact, and value of knowledge, publications, and patents, and economic benefits. It challenges current approaches to education, research, creativity, and skills development, infrastructure, investment, and policy. This book addresses changes needed to better deliver innovation at a time when the world is desperate for solutions to global problems. It will be of interest to scholars and students of innovation from multiple disciplines, as well as practitioners, policymakers, and all those with an interest in scientific innovation. The first volume focuses on the processes, the means, and the impact of scientific innovation. It highlights the way scientific research came to the fore as an instrument of government policy for economic growth, the way research is undertaken, the structures and processes involved, the values, biases, and limitations associated with them, and why these matter for innovation. Questions are asked about who innovation is for and whether value is being

captured in ways that really matter whether the systems are fit for purpose and how meaningful impact could be delivered to meet societal economic and environmental needs and priorities *Nature* Sir Norman Lockyer, 1903 *The Strategic Marketing of Science, Technology, and Medical Journals* Albert N. Greco, 2023-06-30 This book analyzes the various economic and marketing strategies utilized by the five major STM commercial scholarly journal publishers since 2000 This period has witnessed tremendous economic marketing and technological growth including the migration from a print only to a hybrid publishing format With this growth the industry has also seen the rise of open access publishing copyright challenges by websites such as Sci Hub the emergence of sharing platforms such as ResearchGate and Academia.edu as well as the impact of Plan S on publishers universities and authors Given this incredible rate of change across the industry the author explores the diverse strategies and structures created by the largest STM publishers to decipher their effectiveness in addressing technological ethical and copyright issues Also he examines how mergers and acquisitions diversified operations such as Elsevier's acquisition of BePress SSRN and SCOPUS among other platforms Scrutinizing the different managerial marketing technology and economic financial strategies crafted by scholarly journal publishers between 2000-2020 this book offers a comprehensive assessment of the industry's attempts to identify understand cope with and minimize or defeat the herculean threats to its business model **Nature: A Weekly Illustrated Journal of Science**, 1911 **Springer Handbook of Science and Technology Indicators** Wolfgang Glänzel, Henk F. Moed, Ulrich Schmoch, Mike Thelwall, 2019-10-30 This handbook presents the state of the art of quantitative methods and models to understand and assess the science and technology system Focusing on various aspects of the development and application of indicators derived from data on scholarly publications patents and electronic communications the individual chapters written by leading experts discuss theoretical and methodological issues illustrate applications highlight their policy context and relevance and point to future research directions A substantial portion of the book is dedicated to detailed descriptions and analyses of data sources presenting both traditional and advanced approaches It addresses the main bibliographic metrics and indexes such as the journal impact factor and the h-index as well as altmetric and webometric indicators and science mapping techniques on different levels of aggregation and in the context of their value for the assessment of research performance as well as their impact on research policy and society It also presents and critically discusses various national research evaluation systems Complementing the sections reflecting on the science system the technology section includes multiple chapters that explain different aspects of patent statistics patent classification and database search methods to retrieve patent related information In addition it examines the relevance of trademarks and standards as additional technological indicators The Springer Handbook of Science and Technology Indicators is an invaluable resource for practitioners scientists and policy makers wanting a systematic and thorough analysis of the potential and limitations of the various approaches to assess research and research performance *Nature*, 1890 *Collecting, Processing and Presenting Geoscientific Information*
