Pearson, Patricia L. Ellis, Stephen P. Farnsworth, 2002 The objective of this project was to perform an evaluation of the ability of the current modeling process in Texas to forecast travel behavior and patterns within the context of a controlled experimental design The project attempted to calibrate travel demand models using travel surveys conducted in the San Antonio Bexar County area in 1969 These models would then be applied to forecast travel behavior and patterns for the years 1980 and 1990 with the results compared to observed conditions Due to data limitations researchers did not consider the model developed for 1970 acceptable in terms of meeting the calibration criteria that were established This negated the application of the model to 1980 and 1990 since the results could not be interpreted with any confidence A number of recommendations on the model information needs for retention in future model calibration validation efforts are made The recommendations provide the basis for examining travel demand models within controlled conditions as a routine

part of the modeling process Planning and Analysis, 2005 National Research Council (U.S.). Transportation Research Board, 2005 No 1931 examines subjects such as how a policy shift in the Netherlands from the national to the regional level created opportunities for engineers and spatial planners to collaborate and how a small town in Oregon managed a combined state highway main street project This volume of the TRR Journal also includes a paper focusing on three case studies on improved relationships between states and Native American governments pub website **User Costs on the I-15 Design-build Reconstruction** Peter T. Martin, 2003 **Planning and Analysis, 2006** National Research Council (U.S.). Transportation Research Board, 2006 The Propagation of Uncertainty Through Travel Demand Models Yong Zhao, Kara Kockelman, 2000 The future operations of transportation systems involve enormous uncertainty in both input and model parameters This work investigates the stability of contemporary transport demand model output by quantifying variability in model input such as zonal socioeconomic data and trip generation rates It simulates the propagation of their variation through a series of common demand models over a simplified twenty five zone network The results suggest that uncertainty may be compounded over a series of models and highly correlated across output The propagated uncertainty varies remarkably in link flows thus some link flows may be more uncertain than others The final step model trip assignment may reduce prior increased uncertainty through the first three steps but generally could not lessen the uncertainty lower than the input uncertainty Mispredictions at early stages e g trip generation in multi stage models appear to amplify across later stages thus improvements to these models and their estimates are sorely needed **Development and Application of Computer Techniques to Environmental Studies** C. A. Brebbia, Paolo Zannetti, 2002 Featuring the proceedings of the Ninth International Conference on The Modeling Monitoring and Management of Environmental Problems ENVIROSOFT this book presents developments and practical implementations in the theoretical numerical and applicable aspects of computer analysis simulation modelling control and forecasting for environmental applications Environment and Planning, 2002 Journal of urban planning and design Publishes research in the application of formal methods methods models and theories to spatial problems involving the built environment and the spatial structure of cities and regions Includes the application of computers to planning and design in particular the use of shape grammars artificial intelligence and morphological methods to buildings and towns the use of multimedia and GIS in urban and regional planning and the development of ideas concerning the virtual city **Refinement of FSUTMS Trip Distribution Methodology**, 2004 **Input, Parameter, and Spatial Uncertainty in a Fully Integrated Land Use and Transportation Model** Michael James Clay, 2005 **Transit** National Research Council (U.S.).
