Performance Enhancement through Biotechnology Has No Place in Sports

The debate over athletes' use of performance-enhancing substances is getting more complicated as biotechnologies such as gene therapy become a reality. The availability of these new methods of boosting performance will force us to decide what we value most in sports—displays of physical excellence developed through hard work or victory at all costs. For centuries, spectators and athletes have cherished the tradition of fairness in sports. While sports competition is, of course, largely about winning, it is also about the means by which a player or team wins. Athletes who use any type of biotechnology give themselves an unfair advantage and disrupt the sense of fair play, and they should be banned from competition.

Researchers are experimenting with techniques that could manipulate an athlete's genetic code to build stronger muscles or increase endurance. Searching for cures for diseases like Parkinson's and muscular dystrophy, scientists at the University of Pennsylvania have created "Schwarzenegger mice," rodents that grew larger-than-normal muscles after receiving injections with a gene that stimulates growth protein. The researchers also found that a combination of gene manipulation and exercise led to a 35% increase in the strength of rats' leg muscles (Lamb 13).
