(Q. no 1-3). Read the following passage carefully and answer the questions that follow, choosing the correct option-

Meanwhile my friend had not ceased to worry about me. His love for me led him to think that, if I persisted in my objections to meat-eating, I should not only develop a weak constitution but should never feel at home in English society.

He therefore made one last effort to reform me. He one day invited me to go to the theatre. Before the play we were to dine together at the Holborn Restaurant. It was a very big company of diners in the midst of which my friend and I sat sharing a table between us. The first course was soup. I wondered what it might be made of but dared not ask the friend about it. I therefore summoned the waiter. My friend saw the movement and sternly asked across the table what the matter was. With considerable hesitation I told him that I wanted to enquire if the soup was a vegetable soup.

(taken from the autobiography of M.K. Gandhi)

error free      **Dynamic Travel Choice Models** Huey-Kuo Chen,2012-12-06 This book is the result of several years of research into the modeling and algorithm of problems in dynamic travel choice and related areas Three types of discrete time dynamic travel choice models along with numerical examples are presented i e deterministic stochastic and fuzzy models The notable features pertaining to these models are as follows 1 The asymmetric property of the dynamic link travel time function is clearly verified which leads to a variational inequality formulation 2 The flow propagation constraint is implicitly defined in our model through the incidence relationship between the link inflow and route flow 3 The inflow exit flow and number of vehicles on a link are identified as the three different states over time for the same vehicles under the flow propagation process Therefore only one link variable needs to be used in our dynamic travel choice models This treatment can largely simplify the models complexity and possibly reduce the computation time 4 The developed time space network is consistent with scaling units both in temporal and spatial dimensions 5 The proposed nested diagonalization method takes care of two types of link interactions i e actual link travel times and inflows other than that on the subject time space link 6 The equivalence analysis between a dynamic travel choice model and its corresponding equilibrium condition is performed by proving both the necessary and sufficient conditions under the presumption of equilibrated actual travel times
