The Far Eastern Review ,1917 *The Weekly Review of the Far East* ,1921 Millard's Review of the Far East ,1921
Vol 34 includes Special tariff conference issue Nov 6 1925 Sustainable Minerals Operations in the Developing World
Geological Society of London,2005 The sustainable development of minerals which are non renewable resources is a major challenge in today s world In this regard the true definition of sustainability is a debating point in itself can such a concept exist with respect to non renewable resources Perhaps the ideal sustainability model is one that minimizes negative environmental impact and maximizes benefits to society the economy and regional national development Developed and near developed economies rely for commodity supplies on developing countries where major mining operations are often a mainstay of the domestic economy Limited environmental regulation and low wages lead to charges of exploitation Also large numbers of people have no alternative to living by informal often dangerous artisanal mining This Special Publication gives examples from developing countries from all scales of mineral extraction The volume reviews environmental economic health and social problems and highlights the need to solve these before sustainability can be achieved The better solutions require mutual understanding through full involvement of all stakeholders education training and investment so that small scale and artisanal mines can grow into well managed operations At larger scales most major international mining companies have now improved their practices and are monitoring their progress although there is no room for complacency in this rapidly changing area The Far Eastern Review, Engineering, Finance, Commerce ,1906 Thanatia: The Destiny Of The Earth's Mineral Resources - A Thermodynamic Cradle-to-cradle Assessment Antonio Valero Capilla,Alicia Valero Capilla,2014-08-18
Is Gaia becoming Thanatia a resource exhausted planet For how long can our high tech society be sustained in the light of declining mineral ore grades heavy dependence on un recycled critical metals and accelerated material dispersion These are all root causes of future disruptions that need to be addressed today This book presents a cradle to cradle view of the Earth s abiotic resources through a novel and rigorous approach based on the Second Law of Thermodynamics heat dissipates and materials deteriorate and disperse Quality is irreversibly lost This allows for the assessment of such depletion and can be used to estimate the year where production of the main mineral commodities could reach its zenith By postulating Thanatia one acquires a sense of destiny and a concern for a unified global management of the planet s abiotic resource endowment The book covers the core aspects of geology geochemistry mining metallurgy economics the environment thermodynamics and thermochemistry It is supported by comprehensive databases related to mineral resources including detailed compositions of the Earth s layers thermochemical properties of over 300 substances historical energy and mineral resource inventories energy consumption and environmental impacts in the mining and metallurgical sector and world recycling rates of commodities **Establish a Department of Natural Resources** United States.
