

classification is done based on the manual observation by evaluators who are guided by the criteria of each category. For example, if the evaluator comes across a response that is generated by system *i* and the response appears to be an uninformative attempt to notify the user that no valid answer can be found, then we can classify that response as QI_i . This is the way that system *i* generates uninformative response in the event of no answer.

We first look at the responses generated by Answerillon, and from the nature of their responses, we can group them into three relevant categories:

- IQ_A : responses with some elements that meet the questions' requirements (e.g. question 18 in Table II);
- EQ_A : responses with completely irrelevant information (e.g. question 37 in Table II);
- OI_A : uninformative responses in the event of no answers (e.g. question 43 in Table II); and
- OQ_A : not relevant.

TABLE II
PART OF THE RESPONSES BY ANSWERILLON

	Question	Response
question 18	List the companies who used Microsoft?	<ul style="list-style-type: none"> The United States Department of Justice (DOJ) and the FBI is there who successfully used Microsoft over their Trojans infections have reported that they US coast guard Microsoft or to two separate companies. None of these companies used Microsoft when it began going down in this incident in Windows Media Player, because they could not be sure their technology was in there.
question 37	Which judge presided the ruling of the case by Southwester against Microsoft?	<ul style="list-style-type: none"> Currently Microsoft Judge Tony Blanding at Brook, Wash. A month ago, lawyers for the accused (BY Microsoft) indicted US District Judge Ronald Wilkins, who presided over the lawsuit (have said, to drop the case because the DMCA is unconstitutional).
question 43	What provided the closing of the opening case against Microsoft, America?	I'm not sure what you mean.

Following that, we move on to study the responses generated by START. Similarly, based on the nature of the responses produced, we can group the responses into three relevant categories:

- IQ_S : responses that provide accurate and direct answers to questions;
- EQ_S : not relevant;
- OI_S : uninformative responses in the event of no answers (e.g. question 38 in Table III); and
- OQ_S : responses that suggest possible spelling mistake (e.g. question 29 in Table III).

TABLE III
PART OF THE RESPONSES BY START

	Question	Response
question 29	What was the closing of the case against Microsoft?	This would NOT may be completed.
question 38	What caused the closing of the case by Southwester against Microsoft?	Unfortunately, I don't know who caused the closing of the case against Microsoft.

Lastly, based on the nature of the responses produced by NaLURE, we group the responses into three relevant categories:

- IQ_N : responses that provide accurate and direct answers to questions (e.g. question 43 in Table IV);
- EQ_N : not relevant;
- OI_N : uninformative responses in the event of no answers (e.g. question 32 in Table IV); and
- OQ_N : responses that suggest possible spelling mistake (e.g. question 29 in Table IV).

TABLE IV
PART OF THE RESPONSES BY NaLURE

	Question	Response
question 29	What was the closing of the case against Microsoft?	There are some spelling errors in the question. What was the closing of the <u>case</u> against Microsoft?
question 32	What was the closing of the case against Microsoft by Southwester?	There is no such thing as a closing (Southwester) as placed?
question 43	What provided the closing of the opening case against Microsoft, America?	Anthony Edward Blair signed these Trojans closed the resolution of the case.

After classification of the responses is done, a scoring mechanism is used to determine responses from which system are of the best overall quality. A pair-wise relative comparison is performed and points are assigned based on superiority of responses of the same category. If there are *n* systems under evaluation, then there should be $\frac{n(n-1)}{2}$ pairs. Let i_j represents the pair of system R_{i_1} and R_{i_2} . To perform the scoring, a table is constructed as shown in Table V where the column header represents all the i_1, i_2, \dots, i_n pairs. The row header will consist of the two general categories IQ_i and EQ_i and other evaluation-specific categories OQ_i, R .

TABLE V
PAIR-WISE COMPARISON WITH SCORING

Category	i_1	i_2	i_3	i_4	...	i_n	i_n
IQ_i	R_{i_1}	R_{i_2}	R_{i_3}	R_{i_4}		R_{i_n}	R_{i_n}
EQ_i							
OQ_i							
Total							

Then for every i_j , we compare $IQ_R_{i_1}$ with $IQ_R_{i_2}$, $EQ_R_{i_1}$ with $EQ_R_{i_2}$, and other $OQ_R_{i_1}$ with $OQ_R_{i_2}$. The rules for superiority comparison and assigning of score are as follows:

- If the description of the responses for R_{i_1} is better than R_{i_2} under a particular category, then R_{i_1} is assigned with 1 and R_{i_2} is assigned with 0 under the same category.
